As BMW's "middle child," the 5 series has drawn features from the company's smallest and largest models, establishing a reputation for performance and practicality through multiple generations. This book covers the history of the 5 series midsize sedan and the related X5 SUV from September 1972 to the e60's major makeover for 2008 and the development of the e70 X5. Specific mechanical, electronic and cosmetic changes are described, including the time of and reasons for their introduction. Several aspects of BMW's corporate history and technically related models such as the 6-series are also described, as are aftermarket modifications by Alpina, Hartge, and other specialist BMW tuners and speed shops. Built with twin, underwing engines, tricycle landing gear and shoulder-mounted wings, the Grumman F7F Tigercat was an unusual looking, all-metal fighter. It was also one of the highest-performance piston-engined fighters of all time. Originally designed as a carrier-based aircraft, the F7F failed its initial trials, and ended up flying primarily as a land-based attack aircraft for the Marines. Equipped with radar and a second seat for an operator, the Tigercat also flew as a night-fighter and reconnaissance platform. Although it was introduced in 1944, the Tigercat never saw action in WWII, and had a limited role in Korea. The F7F found a new role in non-military use, flying as a fire-fighting aircraft and camera ship for Hollywood in the 1970s. Originally printed by the U.S. Navy, this F7F Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. This facsimile has been reformatted. Care has been taken to preserve the integrity of the text.
