ER model is based on three basic concepts: Entities, Attributes & Relationships An entity can be place, person, object, event or a concept, which stores data in the database Relationship is nothing but an association among two or more entities A weak entity is a type of entity which doesn't have its key attribute

An Entity-relationship model (ER model) describes the structure of a database with the help of a diagram, which is known as Entity Relationship Diagram (ER Diagram). An ER model is a design or blueprint of a database that can later be implemented as a database. The main components of E-R model are: entity set and relationship set. What is an Entity Relationship Diagram (ER Diagram)? An ER diagram shows the relationship among entity sets.

Entity-Relationship Model | Concise Guide To Entity ...

An entity-relationship model (or ER model) describes interrelated things of interest in a specific domain of knowledge. A basic ER model is composed of entity types (which classify the things of interest) and specifies relationships that can exist between entities (instances of those entity types).

ER Diagram Tutorial in DBMS (with Example)

A relationship r is an ordered n -tuple (e_1, e_2, \dots, e_n) , where e_i is a member of entity set E_i for $1 \leq i \leq n$. We say, the entities e_1, e_2, \dots, e_n participate in a relationship r . Relationship set: A relationship set is a set of relationships of the same type that have the same properties.
