Tech giants and automakers have been teaching robots to drive. Robot-controlled cars have already logged millions of miles. These technological marvels promise cleaner air, smoother traffic, and tens of thousands of lives saved. But even if robots turn into responsible drivers, are we ready to be a nation of passengers? In *Are We There Yet?*, Dan Albert combines historical scholarship with personal narrative to explore how car culture has suffused America's DNA. The plain, old-fashioned, human-driven car built our economy, won our wars, and shaped our democratic creed as it moved us about. Driver's ed made teenagers into citizens; auto repair made boys into men. Crusades against the automobile are nothing new. Its arrival sparked battles over street space, pitting the masses against the millionaires who terrorized pedestrians. When the masses got cars of their own, they learned to love driving too. During World War II, Washington nationalized Detroit and postwar Americans embraced car and country as if they were

one. Then came 1960s environmentalism and the energy crises of the 1970s. Many predicted, even welcomed, the death of the automobile. But many more rose to its defense. They embraced trucker culture and took to Citizen Band radios, demanding enough gas to keep their big boats afloat. Since the 1980s, the car culture has triumphed and we now drive more miles than ever before. Have we reached the end of the road this time? Fewer young people are learning to drive. Ride hailing is replacing car buying, and with electrification a long and noble tradition of amateur car repair—to say nothing of the visceral sound of gasoline exploding inside a big V8—will come to an end. When a robot takes over the driver's seat, what's to become of us? *Are We There Yet?* carries us from muddy tracks to superhighways, from horseless buggies to driverless electric vehicles. Like any good road trip, it's an adventure so fun you don't even notice how much you've learned along the way.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, *Lemon-Aid* guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, fess up."

Many of the Ferrari single seaters and sports racers that won world championships were born of the imagination of Mauro Forghieri and designed by him. That was the case with the John Surtees 1964 158 F1 and the unbeatable Ts of the Lauda-Regazzoni era. The same can be said of the 250 P, the 330 P3 and P4, as well, naturally, as the 312 'PB', the unquestioned protagonists among the sports racing cars of the 1960s and 1970s. The life of the outstanding Mauro Forghieri is told in this book, in which noted stories, especially those that have remained unpublished for years, intertwine in an riveting narrative, supported by a wealth of absolutely unpublished illustrations, a large portion of which come from the publisher's archives.
