New York's repertory movie houses specialized in presenting films ignored by mainstream and art house audiences. Curating vintage and undistributed movies from various countries, they educated the public about the art of film at a time when the cinema had begun to be respected as an art form. Operating on shoestring budgets in funky settings, each repertory house had its own personality, reflecting the preferences of the (often eccentric) proprietor. While a few theaters existed in other cities, New York offered the greatest number and variety. Focusing on the active years from 1960 through 1994, this book documents the repertory movement in the context of economics and film culture.

"This collection of essays originated in a series of conferences held at the University of Pennsylvania's Wharton School in November 2012 and April 2013"--Preface.

A comprehensive summary of the state-of-the-art of the field in clinical practice and research in the second decade of the 21st century Features future directions for research and clinical practice in integrative medicine and aging.

In the Taiwanese film industry, the dichotomy between 'art-house' and commercially viable films is heavily emphasized. However, since the democratization of the political landscape in Taiwan, Taiwanese cinema has become internationally fluid. As the case studies in this book demonstrate, filmmakers such as Hou Hsiao-hsien, Edward Yang, Tsai Ming-liang, and Ang Lee each engage with international audience expectations. New Taiwanese Cinema in Focus therefore presents the Taiwanese New Wave and Second Wave movements with an emphasis on intertextuality, citation and trans-cultural dialogue. Wilson argues that the cinema of Taiwan since the 1980s should be read emblematically; that is, as a representation of the greater paradox that exists in national and transnational cinema studies. She argues that these unlikely relationships create the need

for a new way of thinking about 'transnationalism' altogether, making this an essential read for advanced students and scholars in both Film Studies and Asian Studies.

Examines the way people interact with both natural and man-made environments from many aspects of study, including biology, psychology, sociology, and environmental science.

Methods in Toxicology, Volume 2: Mitochondrial Dysfunction provides a source of methods, techniques, and experimental approaches for studying the role of abnormal mitochondrial function in cell injury. The book discusses the methods for the preparation and basic functional assessment of mitochondria from liver, kidney, muscle, and brain; the methods for assessing mitochondrial dysfunction in vivo and in intact organs; and the structural aspects of mitochondrial dysfunction are addressed. The text also describes chemical detoxification and metabolism as well as specific metabolic reactions that are especially important targets or indicators of damage. The methods for measurement of alterations in fatty acid and phospholipid metabolism and for the analysis and manipulation of oxidative injury and antioxidant systems are also considered. The book further tackles additional methods on mitochondrial energetics and transport pro-

cesses; approaches for assessing impaired function of mitochondria; and genetic and developmental aspects of mitochondrial disease and toxicology. The text also looks into mitochondrial DNA synthesis, covalent binding to mitochondrial DNA, DNA repair, and mitochondrial dysfunction in the context of developing individuals and cellular differentiation. Microbiologists, toxicologists, biochemists, and molecular pharmacologists will find the book invaluable.

The growing consumer interest in health and fitness has expanded the market for a wide range of products, from yoga mats to the multiple dietary supplements now on the market. Supplements are popular, but are they safe? Many dietary supplements are probably safe when used as recommended. However, since 1994 when Congress decided that they should be regulated as if they were foods, they are assumed to be safe unless the Food and Drug Administration can demonstrate that they pose a significant risk to the consumer. But there are many types of products that qualify as dietary supplements, and the distinctions can become muddled and vague. Manufacturers are not legally required to provide specific information about safety before marketing their products. And the sales of supplements have been steadily increasing--all together, the various types now bring in almost \$16 billion per year. Given these confounding factors, what kind of information can the Food and Drug Administration use to effectively regulate dietary supplements? This book provides a framework for evaluating dietary supplement safety and protecting the health of consumers.

Neuropsychology is the study of brain-behaviour relationships and examines such domains of cognitive functioning as memory, attention, visual-perceptual abilities, language and intellectual function. It is strongly scientific in its approach and shares an information processing view of the mind with cognitive psychology and cognitive science. It is one of the most eclectic of the psychological disciplines, overlapping at times with areas such as

neuroscience, philosophy (particularly philosophy of mind), neurology, psychiatry and computer science (particularly by making use of artificial neural networks).

This book covers proper migraine diagnostic tools and treatment options. It address-

es the complex nature of treating this pain condition and underscores the intricacies of diagnosis and management. Succinct yet thorough, the book opens with information on migraine diagnosis, symptomology, and pathophysiology. Subsequent chapters examine various current and emerging evidence-based treatment options including immune modulation, stem cell regenerative therapy, and new potential applications of therapeutics for use in pediatric migraine. Following this, the chapters discuss the processes of neuro-modulation, dietary modifications, and surgical treatment for chronic migraine disorders. The book concludes with a handy set of reference guides of commonly prescribed drugs and doses. Written by experts in the field, Migraine provides the headache or pain practitioner with a comprehensive yet quick reference that fills a current gap in the literature for treating migraines and emerging therapeutic options. Archie Green--shipwright, folklorist, teacher, and lobbyist--was a legendary figure in the field of American folklore and vernacular culture studies. An inspiration to a generation of students and scholars, Green was known for the remarkable passion, intelligence, and curiosity he brought to his explorations of everyday people, their communities, their work, and their forms of expression. This book gathers twelve essays intended to represent the range of Green's writings over forty years. Selections include a study of folk depictions in the art of Thomas Hart Benton, investigations of occupational and labor language, and a contemplative account of personal and political morality in the study of Appalachian musicians. In an afterword, Green traces his career and reflects on the state of folklore as a discipline. Woven through the foreword by Robert Cantwell is Green's biography, key to understanding his unique mix of activism and scholarship.

Functional foods and nutraceuticals have received considerable interest in the past decade largely due to increasing consumer awareness of the health benefits associated with food. Diet in human health is no longer a matter of simple nutrition: consumers are more proactive and increasingly interested in the health benefits of functional foods and their role in the prevention of illness and chronic conditions. This, combined with an aging population that focuses not only on longevity but also quality of life, has created a market for functional foods and nutraceuticals. A fully updated and revised second edition, Genomics, Proteomics and Metabolomics in Nutraceuticals and Functional Foods reflects the recent upsurge in "omics" technologies and features 48 chapters that cover topics including genomics, proteomics, metabolomics, epigenetics, peptidomics, nutrigenomics and human health, transcriptomics, nutriethics and nanotechnology. This cutting-edge volume, written by a panel of experts from around the globe reviews the latest developments in the field with an emphasis on the application of these novel technologies to functional foods and nutraceuticals.

This volume unpacks the representations, motivations, agendas, and projects by focusing on the advances in scholarly research on women and Islamic cultures in the first decade of the 21st century.

Diabetes mellitus is a chronic disease of absolute or relative insulin deficiency or resistance characterized by disturbances in carbohydrate, protein and fat metabolism. It is estimated that between 5-10% of the population suffer from this disease. This syndrome is a contributing factor in a large percentage of deaths from heart attacks and strokes as well as renal failure and vascular disease. About 90% of the cases of diabetes mellitus fall into Type 2 where obesity plays a major role. Research in the field is wide-spread ranging from causes to treatment. This new book brings together leading research from throughout the world.
