Core Topics in General & Emergency Surgery meets the needs of surgeons in higher training and practising consultants for a contemporary and evidence-based account of this sub-specialty that is relevant to their general surgical practice. It is a practical reference source incorporating the most current information on recent developments, management issues and operative procedures. The text is thoroughly referenced and supported by evidence-based recommendations wherever possible, distinguishing between strong evidence to support a conclusion, and evidence suggesting that a recommendation can be reached on the balance of probabilities. This is a title in the Companion to Specialist Surgical Practice series whose eight volumes are an established and highly regarded source of information for the specialist general surgeon. The Companion to Specialist Surgical Practice series provides a current and concise summary of the key topics within each major surgical sub-specialty. Each volume highlights evidence-based practice both in the text and within the extensive list of references at the end of every chapter. An expanded authorship team across the series includes additional European and World experts with an increased emphasis on global practice. The contents of the series have been extensively revised in line with recently published evidence. The volume contains a new chapter on the complications of bariatric surgery. This updated text will appeal to all General Surgeons who wish to keep up to date in both elective and emergency conditions, while providing the relevant information for the Specialist Surgeon who is still required to look after undifferentiated emergencies and carry out routine elective general surgical procedures.

The recent financial meltdown and the resulting global recession have rekindled debates regarding the nature of contemporary capitalism. This book analyses the ongoing financialization of the economy as a development within capitalism, and explores the ways in which it has changed the organization of capitalist power. The authors offer an interpretation of the role of the financial sphere which displays a striking contrast to the majority of contemporary heterodox approaches. Their interpretation stresses the crucial role of financial derivatives in the contemporary organization of capitalist power relations, arguing that the process of financialization is in fact entirely unthinkable in the absence of derivatives. The book also uses Marx's concepts and some of the arguments developed in the framework of the historic Marxist controversies on economic crises in order to gain an insight into the modern neoliberal form of capitalism and the recent financial crisis. Employing a series of international case studies, this book will be essential reading for all those with an interest in the financial crisis, and all those seeking to comprehend the workings of capitalism.
