Neurotology is a branch of medicine that focuses on diagnosing and treating neurological conditions of the inner ear and related structures. There have been many recent advances in neurotology that have been published in general medicine, otolaryngology and neurology journals. This comprehensive book will aggregate this information to provide a more complete picture of the state of the field and will include the authors' own clinical experience. There is a recent marked increase in interest in neurotology, manifested by the clinical experiences and research-publication work of otolaryngologists, neurologists, neuro-ophtalmologists, audiologists and physiotherapists. As a result, this will be a completely state-of-the-art work that includes all up-to-date neurophysiologi-

cal data related to the vestibular system. It has been estimated that 10% of patients that present at an emergency clinic have vestibular disorders, including vertigo, and these disorders are frequently a cause of falls in elderly patients. On the other hand, many physicians treat their patients with vertigo with vestibular blockers, which treat the symptoms but do not cure the disorders. We feel that it is important to supply a source of information on the vestibular system and balance disorders, and this title will do that in a comprehensive manner. This title will be an ideal reference for the diagnosis and treatment of vestibular disorders for otolaryngologists, neurologists, neuro-ophtalmologists, audiologists and physical therapists.

This is the story of a profound revolution in the way biologists explore life's history, understand its evolutionary processes, and reveal its diversity. It is about life's smallest entities, deepest diversity, and greatest cellular biomass: the microbiosphere. Jan Sapp introduces us to a new field of evolutionary biology and a new brand of molecular evolutionists who descend to the foundations of evolution on Earth to explore the origins of the genetic system and the primary life forms from which all others have emerged. In so doing, he examines—from Lamarck to the present—the means of pursuing the evolution of complexity, and of depicting the greatest differences among organisms. The New Foundations of Evolution takes us into a world that classical evolutionists could never have imagined: a deep phylogeny based on three domains of life and multiple kingdoms, and created by mechanisms very unlike those considered by Darwin and his followers. Evolution by leaps seems to occur regularly in the microbial world where molecular evolutionists have shown the inheritance of acquired genes and genomes are major modes of evolutionary innovation. Revisiting the history of microbiology for the first time from the perspective of evolutionary biology, Sapp shows why classical Darwinian conceptions centering on questions of the origin of species were forged without a microbial foundation, why classical microbiologists considered it impossible to know the course of evolution, and classical molecular biologists considered the evolution of the molecular genetic system to be beyond understanding. In telling this stirring story of scientific iconoclasm, this book elucidates how the new evolutionary biology arose, what methods and assumptions underpin it, and the fiery controversies that continue

to shape biologists' understanding of the foundations of evolution today.

In this second volume of two tracing the history of 20th-century American religion, Martin E. Marty tells the story of how America has survived religious disturbances and culturally prospered from them.

The book focuses on the state of education and on the levels of inequality among gender, rural-urban and social groups. Taking into account the various findings from existing literature on the qualitative and quantitative aspects of education, it uses empirical findings based on a revised methodology to draw new conclusions. This revised method was devised to define the size of population eligible for enrollment and was then employed to estimate the Gross Enrollment Rate (GER) and Gross Literacy Rate (GLR) at various completed education levels, using age-wise data from the Population Census, 2011. This methodology is based on the concept that among those eligible for enrollment/literacy, a few never get chance to enrol and others achieve various levels of literacy by remaining engaged in formal or informal education up to various ages. The book comes up with findings that have deep significance so far as policy making is concerned towards improving the state of education in India. There are fourteen hypotheses that the book proposes based on the study and each hypothesis is accompanied with policy suggestions. Interestingly, one of the hypotheses is that arbitrariness of government policies creates more problems and, as such, before proposing a policy change

the government needs to put in more effort and time in planning and come up with carefully chalked out processes. In addition to being a valuable resource for researchers working in this area, the book has huge policy implications and think tanks working towards improving education in India.
