In this volume, the authors present theoretical explanations for a few basic problems connected with the propagation of extra wide band, short impulses in linear media, and with the propagation of whistlers and megawhistlers in plasmas. In addition, the book provides an overview of ground and space based measurements, digital processing and signal analysis. The theoretical treatment in this volume is original in the sense that, unlike former solutions, the authors present a fundamentally non-monochromatic approach. A key feature of this approach is the application of the 'Laplace Transformation' and the 'Method of Inhomogeneous Basic Modes' to solve Maxwell's equations. It is shown that when the obtained theoretical results are applied to digital recordings, the wave analysis process becomes so flexible that it can also be used to investigate other wave propagation problems. These are both terrestrial phenomena (like atmospheric and seismic activity, buried target detection, etc.) and phenomena in space (planetary, interplanetary, plasmaspheric, whistler and megawhistler propagation). The book is aimed at a technical and professional audience working on whistler science and/or wave propagation problems.

Alternative strategies of economic development have received little attention in the literature. Academics rarely compare certain strategic features or assess the performance of different strategies in terms of outcomes. This book seeks to address that gap and to provide a theoretical background to the shift from industry to human capital-intensive services as the engine of economic growth. Pioneering studies reveal interesting trends and patterns that point to the growing importance of intangible capital for the level of GDP. They also indicate a much greater role of economic freedom in bringing about this second great structural change than was the case with industrialization. With this perspective on structural change and the role of freedom, Shortcut or Piecemeal also provides an extensive assessment of four key developing countries: Brazil, Russia, India, and China. Subjects: 1. Central planning—History. 2. Economic development—History
