Zero-product property. For example, if $x(x + 2) = 0$, then $x = 0$ or $x + 2 = 0$. If you're trying to perform an operation that isn't on the previous list, then the operation probably isn't correct. After all, algebra has been around since 1600 BC, and if a property exists, someone has probably already discovered it.

The Distributive Property is easy to remember, if you recall that "multiplication distributes over addition". Formally, they write this property as $a(b + c) = ab + ac$. In numbers, this means, for example, that $2(3 + 4) = 2 \times 3 + 2 \times 4$. Any time they refer in a problem to using the Distributive Property, they want you to take something through the parentheses (or factor something out); any time a ...
