Digestive System (Anatomy): How It Works

Section 38-2 38-2The Process of Digestion. Food presents every chordate with at least two challenges. The first is how to obtain it. Once a chordate has caught, or gathered its food, it faces a new challenge—how to break that food down into small molecules that can be passed to the cells that need them. In humans and many other chordates, this is the job of the digestive system. As food passes through the digestive system, it gets disassembled, distributing its nutrient value to the body ...

38-2: The Process of Digestion Flashcards | Quizlet

Following pasteurisation, the food waste is pumped into large tanks called digesters. The digesters contain cultures of anaerobic bacteria that digest the waste over a period of approximately 55 days. The digestion process results in the production of biogas which is around 60% methane and 40% carbon dioxide.

Digestive Processes. The processes of digestion include six activities: ingestion, propulsion, mechanical or physical digestion, chemical digestion, absorption, and defecation. The first of these processes, ingestion, refers to the entry of food into the alimentary canal through the mouth.
