Pindar and the Cult of Heroes combines a study of Greek culture and religion (hero cult) with a literary-critical study of Pindar's epinician poetry. It looks at hero cult generally, but focuses especially on heroization in the 5th century BC. There are individual chapters on the heroization of war dead, of athletes, and on the religious treatment of the living in the 5th century. Hero cult, Bruno Currie argues, could be anticipated, in different ways, in a person's lifetime. Epinician poetry too should be interpreted in the light of this cultural context; fundamentally, this genre explores the patron's religious status. The book features extensive studies of Pindar's Pythians 2, 3, 5, Isthmian 7, and Nemean 7.

He unhesitatingly names those individuals who bear responsibility for these catastrophic deaths, bringing into sharper focus than ever before the facts, the perpetrators, and the events of the Soviet Union's years of terror."--BOOK JACKET.

The aim of this review was to provide an evidence base for policy development on vocational rehabilitation - defined as whatever helps someone with a health problem to stay at, return to and remain at work. The focus was on adults of working age, the common health problems that account for two-thirds of long-term sickness (mild/moderate musculoskeletal, mental health and cardio-respiratory conditions) and work outcomes (staying at, returning to and remaining in work). Data from some 450 scientific reviews and reports were included in evidence tables. The review demonstrates that there is a strong scientific evidence base for many aspects of vocational rehabilitation, a good business case for it and more evidence on cost-benefits than for many health and social policy areas. Generic and condition-specific findings are reported, and practical suggestions offered for the differing types of people affected by health problems. Vocational rehabilitation should be a fundamental element of government strategy to improve the health of working age people.

A critical reexamination of Jean-Baptiste Carpeaux's bust *Why Born Enslaved!*, this book unpacks the sculpture's engagement with—and defiance of—an antislavery discourse. In this clear-eyed look at the Black figure in nineteenth-century sculpture, noted art historians and writers discuss how emerging categories of racial difference propagated by the scientific field of ethnography grew in popularity alongside a crescendo in cultural production in France during the Second Empire. By comparing Carpeaux's bust *Why Born Enslaved!* to works by his contemporaries on both sides of the Atlantic, as well as to objects by twenty-first-century artists Kara Walker and Kehinde Wiley, the authors touch on such key themes as the portrayal of Black enslavement and emancipation; the commodification of images of Black figures; the role of sculpture in generating the sympathies of its audiences; and the relevance of Carpeaux's sculpture to legacies of empire in the post-colonial present. The book also provides a chronology of events central to the histories of transatlantic slavery, abolition, colonialism, and empire.

Explores the homogenization of American culture and the impact of the fast food industry on modern-day health, economy, politics, popular culture, entertainment, and food production. With considerable learning and insight, Broglio reveals how artists are both complicit with such objectification of nature, and at other moments work toward a more vivid connection to the environment."--BOOK JACKET.

This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

Few would deny the crucial role that entrepreneurs play in our increasingly global economy-but exactly what is this vital, yet loosely defined business force we call the entrepreneurial spirit? This landmark study is the first to examine analytically the nature of the opportunities that entrepreneurs pursue, the problems they face, the traits they require, and the social and economic contributions they make. Until recently, entrepreneurs have been largely ignored in modern economic theory. But at the dawn of a networked age, marked by the advent of e-business and the home office, there's no question that entrepreneurs have recaptured the popular imagination. Studies now show that most men and women dream of starting their own businesses rather than rising through the corporate ranks. Yet in spite of increased attention by many of today's leading business schools, entrepreneurship has remained largely a mystery, an apparently intuitive sense of values possessed by certain individuals.; This book targets the issues central to successful start-up ventures, such as endowments and opportunities, planning versus adaptation, securing resources, corporate initiatives, venture capital, revolutionary ventures and the evolution of fledgling businesses. Focusing on hard data and evaluations of numerous start-up businesses, including many of today's major industry leaders, this book presents a new economic model-a key to understanding the guts, determination, luck and skills that constitute the underpinnings of corporate success. Written in clear, concise prose, *The Origin and Evolution of New Businesses* goes behind the charts and graphs of business theory to the true heart of success. It is essential reading for business students, would-be entrepreneurs, or executives wanting to incorporate the vitality of the entrepreneurial spirit into their organization.

THE TOP 10 SUNDAY TIMES BESTSELLER Shortlisted for the FT Business Book of the Year Award 2019 'Easily the most important book to be published this century. I find it hard to take any young activist seriously who hasn't at least familiarised themselves with Zuboff's central ideas.' - Zadie Smith, *The Guardian* The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control us. The heady optimism of the Internet's early days is gone. Technologies that were meant to liberate us have deepened inequality and stoked divisions. Tech companies gather our information online and sell it to the highest bidder, whether government or retailer. Profits now depend not only on predicting our behaviour but modifying it too. How will this fusion of capitalism and the digital shape our values and define our future? Shoshana Zuboff shows that we are at a crossroads. We still have the power to decide what kind of world we want to live in, and what we decide now will shape the rest of the century. Our choices: allow technology to enrich the few and impoverish the many, or harness it and distribute its benefits. *The Age of Surveillance Capitalism* is a deeply-reasoned examination of the threat of unprecedented power free from democratic oversight. As it explores this new capitalism's impact on society, politics, business, and technology, it exposes the struggles that will decide both the next chapter of capitalism and the meaning of information civilization. Most critically, it shows how we can protect ourselves and our communities and ensure we are the masters of the digital rather than its slaves.

An important part of eighteenth-century maritime conflict involved the destruction of enemy commerce and the protection of home trade. In performing these tasks, state navies were augmented by privateers, vessels owned, equipped and manned by private individuals authorised by their governments to attack and seize the enemy's seaborne property. For their reward, the investors and seafarers engaged in privateering ventures shared in the proceeds of any ships and goods taken and condemned as lawful prize. Privateering therefore represented a business opportunity to the maritime community, a chance to acquire instant wealth at the enemy's expense; at the same time, it appeared as a cheap convenient means by which the state might supplement its naval strength. In this important analysis David J. Starkey draws upon a wealth of documentary evidence to throw fresh light upon the character, scale and significance of the British privateering business. Detailed examination of the steps by which Henry II negotiated peace and established the authority of his government. This book tells the story of the transition from the reign of King Stephen of

England (1135-54) to that of Henry II (1154-89). It is a story of change: from civil war to peace, from a threatened throne to stability, from weak to strong royal government. Although previous writers on the general period have recognised the importance of the changeover, its details have been left largely unconsidered until now. Professor Amt explores the problems Henry faced in obtaining the throne, the conditions which allowed the negotiation of the peace treaty of 1153, the terms of that treaty and the basic steps by which the new royal government established its authority in England after 1154. This is achieved through detailed studies of both particular geographical regions (Gloucestershire, Oxfordshire and Essex) and of groups of people (Flemings and financial networks) who proved helpful in easing the transition. Also included are new analyses of royal financial administration in the first five years of the new reign. EMILIE AMT is associate professor of history, Washington College, Chestertown, Maryland.

"Why aren't I as wealthy as I should be?" Many people ask this question of themselves all the time. Often they are hard-working, well educated middle- to high-income people. Why, then, are so few affluent. For nearly two decades the answer has been found in the bestselling *The Millionaire Next Door: The Surprising Secrets of America's Wealthy*, reissued with a new foreword for the twenty-first century by Dr. Thomas J. Stanley. According to the authors, most people have it all wrong about how you become wealthy in America. Wealth in America is more often the result of hard work, diligent savings, and living below your means than it is about inheritance, advance degrees, and even intelligence. *The Millionaire Next Door* identifies seven common traits that show up again and again among those who have accumulated wealth. You will learn, for example, that millionaires bargain shop for used cars, pay a tiny fraction of their wealth in income tax, raise children who are often unaware of their family's wealth until they are adults, and, above all, reject the big-spending lifestyles most of us associate with rich people. In fact, you will learn that the flashy millionaires glamorized in the media represent only a tiny minority of America's rich. Most of the truly wealthy in this country don't live in Beverly Hills or on Park Avenue—they live next door.

How do our patients come to be the way they are? What forces shape their conscious and unconscious thoughts and feelings? How can we use this information to best help them? Constructing psychodynamic formulations is one of the best ways for mental health professionals to answer questions like these. It can help clinicians in all mental health settings understand their patients, set treatment goals, choose therapeutic strategies, construct meaningful interventions and conduct treatment. Despite the centrality of psychodynamic formulation to our work with patients, few students are taught how to construct them in a clear systematic way. This book offers students and practitioners from all fields of mental health a clear, practical, operationalized method for constructing psychodynamic formulations, with an emphasis on the following steps: DESCRIBING problems and patterns REVIEWING the developmental history LINKING problems and patterns to history using organizing ideas about development. The unique, up-to-date perspective of this book integrates psychodynamic theories with ideas about the role of genetics, trauma, and early cognitive and emotional difficulties on development to help clinicians develop effective formulations. *Psychodynamic Formulation* is written in the same clear, concise style of *Psychodynamic Psychotherapy: A Clinical Manual* (Wiley 2011). In the early nineteenth century, chemistry emerged in Europe as a truly experimental discipline. What set this process in motion, and how did it evolve? Experimentalization in chemistry was driven by a seemingly innocuous tool: the sign system of chemical formulas invented by the Swedish chemist Jacob Berzelius. By tracing the history of this "paper tool," the author reveals how chemistry quickly lost its orientation to natural history and became a major productive force in industrial society. These formulas were not merely a convenient shorthand, but productive tools for creating order amid the chaos of early nineteenth-century organic chemistry. With these formulas, chemists

could create a multifaceted world on paper, which they then correlated with experiments and the traces produced in test tubes and flasks. The author's semiotic approach to the formulas allows her to show in detail how their particular semantic and representational qualities made them especially useful as paper tools for productive application.

Beyond Contractual Morality looks at current debates over the meaning of liberalism by reexamining their roots in eighteenth-century texts, which demonstrate the historical intertwining of political, legal and moral problems in their extension of social contract theory into various realms of public and private lives. Writers such as Rousseau, Voltaire, Sade, and Montesquieu are discussed. In light of contemporary debates over liberalism, and informed by the problems of contemporary democratic, pluralistic culture, *Beyond Contractual Morality* reexamines the roots of these current discussions in eighteenth-century texts. Enlightenment texts demonstrate the historical intertwining of political, legal and moral problems in their extension of social contract theory into various realms of private and public life. Specifically, these texts point to an over-reliance on the notion of contract to resolve ethical dilemmas. A range of issues and authors is discussed, including: the historical development of social contract theory from Hobbes to Rousseau; conflicting conceptions of education in Rousseau's writings; the rise of professional ethics; the concept of tolerance as discussed by Montesquieu, Voltaire, and Rousseau; the divide between the public and private realms in the writings of Charriere and Sade. *Beyond Contractual Morality* concludes with a reemphasis on the contemporary context of debate and proposes a defense of a revised version of liberalism that can take account of positive duties without sacrificing individual autonomy. Julia Simon is Associate Professor of French at the Pennsylvania State University.
