## TDEWMP - LOPEZ DOUGLAS

From the “exhilarating, powerful, and entertaining” (Guardian) storyteller of the Avery Cates series comes a gritty supernatural thriller featuring a pair of unlikely heroes caught up in the underground world of blood magic. The ethics in a world of blood are gray—and an underground strata of blood magicians has been engineering disasters for centuries in order to acquire enough fuel for their spells. They are not good people. Some practitioners, however, use the Words and a swipe of the blade to cast simpler spells, such as Charms and Cantrips to gas up \$1 bills so they appear to be \$20s. Lem Vonnegan and his sidekick Mags fall into this level of mage, hustlers and con men all. Lem tries to be ethical by using only his own blood, by not using Bleeders or “volunteers.” But it makes life hard. Soon they might have to get honest work. When the pair encounters a girl who's been kidnapped and marked up with magic runes for a ritual spell, it's clear they're in over their heads. Turning to Lem's estranged master for help, they are told that not only is the girl's life all but forfeit, but that the world's preeminent mage, Mika Renar, has earth-shattering plans for her—and Lem just got in the way. With the fate of the world on the line, and Lem both spooked and intrigued by the mysterious girl, the other nominates him to become the huckleberry who'll take down Renar. But even if he, Mags, and the simpletons who follow him prevail, they're dealing with the kind of power that doesn't understand defeat, or mercy. Book One in the Ustari Cycle, the first portion of *We Are Not Good People* was originally published in an altered form as *Trickster* (Pocket Books).

A look at the rebellious thinkers who are challenging old ideas with their insights into the ways countless elements of complex systems interact to produce spontaneous order out of confusion

Drawing upon art, science, philosophy, and the history of culture, Lewis Mumford explained the origin of the machine age and traced its social results, asserting that the development of modern technology had its roots in the Middle Ages rather than the Industrial Revolution. Mumford sagely argued that it was the moral, economic, and political choices we made, not the machines that we used, that determined our then industrially driven economy. Equal parts powerful history and polemic criticism, *Technics and Civilization* was the first comprehensive attempt in English to portray the development of the machine age over the last thousand years—and to predict the pull the technological still holds over us today. “The questions posed in the first paragraph of *Technics and Civilization* still de-

serve our attention, nearly three quarters of a century after they were written.”—*Journal of Technology and Culture*

Behind me stretch four generations of military lives. This book is for the most part, the story of my life as the daughter of a two star general and the wife of a three star general. It recounts the fascinating lands I was either fortunate enough to reside in or visit and as an adult I went into these civilizations and continents with fire in my belly to capture the cultures, the landscape and the people with my two Nikons hanging off my neck. Even after retirement it was hard to shed my peripatetic life style so I went to China, Bali, Kuala Lumpur and Singapore. It's a story about doing the best you can with the cards you are dealt, about making your way through difficult moments and supporting your children and your husband and keeping it all together. The military is not an easy life but it is a good one. And I do not hesitate to recount some of the more wretched events. For the most part it has been a charmed life. I write about unique incidents: having a gun fired at my car on an early morning trip to the airport in Bangkok. Of a shoot-out in a Pamplona, Spain square and of being reunited with a childhood friend in Oslo, Norway - then a young prince - and at the time of the visit the Crown Prince and now the King. During our two year Italian Odyssey we received a letter from the Countess Chinigo of Ravello for a dinner at her villa above the Amalfi Coast. We did not answer. But on the second effort, we did and thus visited her numerous times in her little gem of a villa. I was a lucky, lucky woman.

Knowledge updating is a never-ending process and so should be the revision of an effective textbook. The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. The authors have, however, been thinking, for the last few years that the book needed not only a thorough revision but rather a substantial rewriting. They now take great pleasure in presenting to the readers the twelfth, thoroughly revised and enlarged, Golden Jubilee edition of the book. The subject-matter in the entire book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities. In this classic text, Jane Jacobs set out to produce an attack on current city planning and rebuilding and to introduce new principles by which these should be governed. The result is one of the most stimulating books on cities ever written. Throughout the post-war period, planners temperamentally unsympathetic to cities have been let loose on our urban environment. Inspired by the ideals of the Garden City or Le Corbusier's Radiant City, they have dreamt up ambitious projects based on self-contained neighbourhoods, super-blocks, rigid 'scientific' plans and endless acres of grass. Yet they seldom stop to look at what actually works on

the ground. The real vitality of cities, argues Jacobs, lies in their diversity, architectural variety, teeming street life and human scale. It is only when we appreciate such fundamental realities that we can hope to create cities that are safe, interesting and economically viable, as well as places that people want to live in. 'Perhaps the most influential single work in the history of town planning... Jacobs has a powerful sense of narrative, a lively wit, a talent for surprise and the ability to touch the emotions as well as the mind' New York Times Book Review

Thomas Thorn is a rough-guy CIA agent who's been on surveillance detail in Chicago for the past forty-eight hours. He and his genius partner Irish have the 'eyes and ears' on a power hungry wannabe and his twenty-something mistress, when a call is intercepted. The voice on the intercept is someone codenamed the "Manipulator" who says the local senator "will be" the next resident of the White House. Thorn understands fully that he has just heard the conversation that if left unfettered will change the world. He surmises quickly that the Manipulator and his European cronies are out for world domination. They seek a new world order in which they hold all the power, but first, they need their puppet senator elected president of the United States. Unbeknownst to Thorn his talents are about to be incorporated into use by a very powerful secret organization known as The Keepers-a powerful counterforce dedicated to the dreams of America's forefathers. A rocket ride of twists and bullets ensues as Thorn and team embark on their quest to stop the Manipulator's duly dispatched vile agent of death-a man simply called Lyons, who has been charged with the plans to vault the puppet senator into the most powerful position in the world. Shortly after, Thorn is then called to a meeting in a small town in North Carolina where he learns of many other elements that are endangering all that America stands for. It is also at this gathering where he meets the temptress agent Vikki Gold. Three days later, after a whirlwind romance with the world-class beauty, his life is turned upside down aboard a yacht moored off of the shores of Key West. It is on board that he learns the truth about his past, the shadow life of his mom and the death of his father at the hands of Lyons. With likeness of mind, vengeance of heart, he and Vikki Gold are vaulted into action along the shores of the East Coast where every stop is a near death experience, but the steadfast goal remains the same. To stop Lyons and to save the United States-by any means necessary.

In this brilliant work, the most influential philosopher since Sartre suggests that such vaunted reforms as the abolition of torture and the emergence of the modern penitentiary have merely shifted the focus of punishment from the prisoner's body to his soul.

"For a time we were titans is the memoir of an LRP/Ranger in Vietnam. It follows ten GIs from their arrival at the LRP compound in Ban Me Thuot in October 1968 to ... September 1969 ... This is the war as a LRP saw it. LRPs were the Long Range Patrol units that served as the eyes and ears of the infantry, who were dropped into enemy territory and given the responsibility of finding the hiding places of an elusive foe. It is not the story of massive battles and strategic operations, but rather depicts actual contacts between four and five man LRP Teams and unknown numbers of North Vietnamese or Vietcong"--Page 4 of cover
