#### **A case of idiopathic diabetes insipidus presented with ...**

A case of central diabetes insipidus following probable type A/H1N1 influenza infection. Kobayashi T(1), Miwa T, Odawara M. Author information: (1)Division of Diabetes, Metabolism and Endocrinology, Third Department of Internal Medicine, Tokyo Medical University, Tokyo, Japan. t-koba@tokyo-med.ac.jp

Diabetes insipidus (DI) is a condition characterized by large amounts of dilute urine and increased thirst. The amount of urine produced can be nearly 20 liters per day. Reduction of fluid has little effect on the concentration of the urine. Complications may include dehydration or seizures.. There are four types of DI, each with a different set of causes.

Diabetes insipidus. View PDF external link opens in a new window ... Case history #2. A 75-year-old woman presents to her family physician with a 6-month history of progressive fatigue and malaise with polyuria, polydipsia, and nocturia. She has a long-standing history of bipolar affective disorder, ...

#### **Case Study - Diabetes Insipidus Flashcards | Quizlet**

Introduction. Essential features of diabetes insipidus (DI) include: polyuria, defined as urine output of more than 4 mL/kg/hr in children (more than 6 mL/kg/hr in neonates); polydipsia, characterized by water intake of more than 2 L/m 2 /d (or more than 5 L/d); and failure to thrive or growth retardation. 1. The essential pathophysiology in central DI (CDI) involves a decrease in antidiuretic ...

#### **A case of idiopathic diabetes insipidus presented with ...**

Diabetes is the most common cause of kidney failure in the United States, but that is because of diabetes mellitus, not diabetes insipidus. 3. Up to 30% of the cases of diabetes insipidus that are eventually diagnosed do not have a contributing medical cause to it that has been discovered.

#### **Diabetes Insipidus Statistics - DiabetesInsipidus.org**

With respect to the similarly named Diabetes Mellitus, a disease already known in ancient Egypt, Greece and Asia, Diabetes Insipidus has been described several thousand years later. In 1670s Thomas Willis, noted the difference in taste of urine from polyuric subjects compared with healthy individuals and started the differentiation of Diabetes Mellitus from the more rare entity of Diabetes ...

#### **History of Diabetes Insipidus - PubMed**

The first, known as the AVPR2 gene mutation, is responsible for 90% of all cases of congenital diabetes insipidus. But it's still rare, occurring in an estimated 1 in 250,000 births. The AVPR2 gene mutation can only be passed down by mothers (who may appear to not be affected) to their sons (who are affected).

#### **Diabetes insipidus - Causes - NHS**

Diabetes insipidus is an uncommon disease process with a low prevalence of 1:25,0000. In clinical practice, congenital forms of diabetes insipidus constitute less than 10% of patient cases.

#### **Diabetes Insipidus Article**

Central diabetes insipidus. Damage to the pituitary gland or hypothalamus from surgery, a tumor, a head injury or an illness can cause central diabetes insipidus by affecting the usual production, storage and release of ADH. An inherited genetic disease can also cause this condition. Nephrogenic diabetes insipidus.

#### **Diabetes insipidus - Symptoms and causes - Mayo Clinic**

In some cases, nephrogenic diabetes insipidus goes away after treatment of the cause. For example, switching medications or taking steps to balance the amount of calcium or potassium in the patient's body may resolve the problem. Medications for nephrogenic diabetes insipidus include diuretics, either alone or combined with aspirin or ibuprofen.

#### **Diabetes Insipidus | NIDDK**

Nephrogenic diabetes insipidus (DI) secondary to chronic urinary tract obstruction is a rare disease. The exact cause is unknown but it is likely that increased collecting duct pressures cause damage to the tubular epithelium, resulting in insensitivity to the action of arginine-vasopressin (AVP).
