From the Preface: "This book was written for the active reader. The first part consists of problems, frequently preceded by definitions and motivation, and sometimes followed by corollaries and historical remarks... The second part, a very short one, consists of hints... The third part, the longest, consists of solutions: proofs, answers, or constructions, depending on the nature of the problem....

The problems in this text are a little difficult, but this book is a great resource. I haven't done a complete reading of the

text, but it had a very nice treatment of a problem that I needed for a research paper. Chances are, if you're faced with a Hilbert Space problem you can't figure out, it's broached in this text in some form.
