The book, Visser's Annotated European Patent Convention, is a commentary on the European Patent Convention and a best-seller in European patent law. The 2021 edition of this preeminent work – the only regularly updated authoritative article-by-article commentary in English on the European Patent Convention (EPC), its implementing regulations, and associated case law provides the complete text of the law annotated with commentary and expert guidance on the interpretation of each paragraph. Since its first edition in 1994 it has provided the European patent community with the necessary insights to practice successfully before the European Patent Office. The EPO recommends the Visser's Annotated European Patent Convention as the first book in its list of non-EPO/WIPO literature to be used for the preparation of the European qualifying examination. In addition to a thorough updating of developments, new material in the 2021 edition includes the following: Amended EPO Guidelines that entered into force on 01.03.2021 Consolidated discussion of procedures relating to oral proceedings held by video conference Commentary on recent amendments to the implementing regulations Recent decisions of the boards of appeal The 2021 edition is suitable for candidates preparing for the EQE 2022. A free supplemental note will be published providing candidates with an overview of the main legal changes between the 2021 edition and the 31.10.2021 legal cut-off date for the EQE 2022.

In many jurisdictions, IP rights are only granted after a thorough examination of formal and substantive requirements. The EPO-EPC Guidelines for Examination (available at www.epo.org) detail the practice and procedure to be followed when examining patent applications before the European Patent Office (EPO) in accordance with the European Patent Convention (EPC) and its Implementing Regulations. Our Indexed version improves on the official version by abbreviating entries and grouping the entries at the front to allow quick scanning, using page numbers to speed up getting to the correct page, indi-

cating sections with significant changes in the last 3 years, and modifying the contents to fully use the page size to give better overviews of paragraphs. This book is suitable as a desktop reference for everyday use by attorneys and administrators. IP law is highly complex and continuously changing, so always double check the status with the latest official resources - this version is expected to be legally valid from 1 Mar 2021 to 28 Feb 2022. This book is also suitable for anyone studying European Patent Law and exam candidates. For European Qualifying Exam (EQE) candidates, this is the official version for EQE 2022 Main Exam & Pre-Exam.

Business process modeling plays an important role in the management of business processes. As valuable design artifacts, business process models are subject to quality considerations. The absence of formal errors such as deadlocks is of paramount importance for the subsequent implementation of the process. In his book Jan Mendling develops a framework for the detection of formal errors in business process models and the prediction of error probability based on quality attributes of these models (metrics). He presents a precise description of Event-driven Process Chains (EPCs), their control-flow semantics and a suitable correctness criterion called EPC soundness.

"This text addresses critical and timely questions in patent law from a truly global perspective, with contributions from leading patent law scholars from various countries and various disciplines. The rich scholarship featured reflects on a wide range of perspectives, offering insights and new approaches to evaluating key institutional, economic, doctrinal, and practical issues that are at the forefront of efforts to reform the global patent system, and to reconfigure geo-political interests in on-going multilateral, trilateral, and bilateral initiatives".--

Photovoltaics for Commercial and Utilities Power Generation is an in-depth review of the solar industry development, and present day state-of-the-art. It emphasizes current and future applications of photovoltaic equipment in the commercial and utility energy sectors, highlighting its use in large scale power generating plants operating in the U.S. deserts. The book reviews all key aspects of the photovoltaic technologies from a theoretical point of view, looking closely at their design parameters, materials, manufacturing, quality and performance. It also covers the practical applications, focusing on large scale photovoltaics as a major alternative energy source. The author examines the advantages and disadvantages of each of today's solar technologies and projects them into the future in search of optimized niche markets and maximum utilization. Key technical issues related to: manufacturing and test procedures, product quality and safety, field performance, environmental impact, and other issues are thoroughly analyzed. Lack of standardized manufacturing processes and operating procedures, fluctuating political and regulatory policies, and the different financing, legal and marketing aspects of the solar industry are amidst the topics discussed in detail as well. Photovoltaics for Commercial and Utilities Power Generation provides a 360 degree view of today's solar energy products and the related manufacturing and operating procedures. It exposes the issues plaguing the solar industry, with the ulti-

mate goal of finding the best solutions as needed to bring photovoltaic technologies to acceptable level of efficient, reliable and cost-effective operation in large scale power generation plants. Large scale PV power generation is one of the keys to meeting the energy and environmental demands of the 21st century. This book identifies the major issues and suggests solutions to the obstacles hindering the large scale deployment of photovoltaics in the U.S. and abroad.

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

Many of the books on construction risk management concentrate on theoretical approaches to the accurate assessment of the overall risks of taking on a new project. Less attention is paid to the typical risks to which the operational level of a project is exposed and how operational managers should approach those risks during project implementation. This book identifies precisely where the major EPC/Design-Build risks occur within an operational framework and shows how best to deal with those risks. The book attempts to offer practical advice, approaches and tools for dealing with risks to which the various operational departments are exposed.

Managing patent portfolios and securing patent protection for global interests is multifaceted and requires local expertise. For 125 years, Hoffmann Eitle has been known for experience and quality in the protection of intellectual property in Europe. This handbook provides targeted guidance for practitioners interested in patent

protection in Europe, including in-depth commentaries on basic patentability requirements, patent prosecution at the EPO, post-grant proceedings in Europe, and an introduction to the expected European Patent with Unitary Effect (EP-UE) and the Unified Patent Court (UPC).

This book constitutes the refereed proceedings of the 5th International Conference on Business Process Management, BPM 2007, held in Brisbane, Australia, in September 2007. The papers are organized in topical sections on business process maturity and performance, business process modeling, case studies, compliance and change, process configuration and execution, formal foundations of BPM, business process mining, and semantic issues in BPM.

This new edition is a comprehensive and practical guide to European patent law - a 'ius commune'. The book highlights the areas of consistency and difference between the most influential European patent law jurisdictions: the European Patent Office, England and Wales, France, Germany, and the Netherlands. The book also draws insights from further afield, with contributions from other, very active, patent jurisdictions, including Italy, Sweden, Denmark, and Switzerland. Uniquely, the book addresses European patent law by subject matter area, assessing the key national and EPO approaches together rather than nation by nation. Each chapter outlines the common ground between the national approaches and provides a guide for the possible application of European patent law in national courts and the UPC in the future. In addition to featuring content on new countries, the second edition includes new chapters dedicated to the substantive aspects of FRAND, declarations, and evidence. There is also an expanded commentary on construction, including common terms used in patent claims. A must-read for anyone working in the field of European patent law.

IT has turned out to be a key factor for the purposes of gaining maturity in Business Process Management (BPM). This book presents a worldwide investigation that was conducted among companies from the 'Forbes Global 2000' list to explore the current usage of software throughout the BPM life cycle and to identify the companies' requirements concerning process modelling. The responses from 130 companies indicate that, at the present time, it is mainly software for process description and analysis that is required, while process execution is supported by general software such as databases, ERP systems and office tools. The resulting complex system landscapes give rise to distinct requirements for BPM software, while the process modelling requirements can be equally satisfied by the most common languages (BPMN, UML, EPC).

This preeminent work has proven the best practical commentary on the TRIPS agree-

ment related to patents and test data. This fifth edition, in which the author has revised the whole text and updated various arguments, continues to articulate with unmatched clarity the specific steps that a government or a company must take, in a wide variety of possible contexts, to ensure that its patent-related obligations under TRIPS are met. The presentation is arranged in an article-by-article format, following the TRIPS Agreement itself as it relates to patents and test data. In this way, the author's incisive analysis covers every issue likely to arise in today's patent and test data administrative and legal practice, including the following: · significance of the recent entry into force of Article 31bis; · developments in enforcement of patent rights in the context of competition law; · the potential effects of Brexit and the new protectionist inclination of US trade policy; · expanded commentary on trade secrets and test data under Article 39; · alternate ways to transpose TRIPS obligations into national law; and · standards of intellectual property protection as a bargaining chip in international trade. The TRIPS Agreement has a direct impact on the daily activities of corporations, governments, and consumers. This book contains a very practical explanation of the meaning of the patent-related TRIPS provisions, how they should be reflected in national law, and how courts are expected to enforce them. For these reasons and more, the Fifth Edition is a crucially important resource for patent and public health lawyers seeking compliance as well as for government officials charged with the implementation of TRIPS obligations.

The rapid, commercially-driven evolution of the Internet has raised concomitant legal concerns that have required responses from both national and international law. This unique text offers a complete analysis of electronic and mobile commerce, exploring the law relating to online contracts and payment systems, electronic marketing, and various forms of cybercrime as well as the regulation of electronic communications networks and services. Written by specialists, this account also provides insights into emerging areas such as internet libel, online gambling, virtual property, cloud computing, smart cards, electronic cash, and the growing use of mobile phones to perform tasks previously carried out by computers.

This book examines patent law and policy in biotechnology across the full lifecycle of the patent, focusing on the patent bargain and the public interest. It considers the central issues of how to strike an effective balance of rights, and whether public inter-

est is adequately safeguarded - two issues that are particularly important in areas of rapidly emerging technology.

Since publication of the First Edition in 1982, Hemostasis and Thrombosis has established itself as the pre-eminent book in the field of coagulation disorders. No other book is as inclusive in scope, with coverage of the field from the standpoint of both basic scientists and clinicians. This comprehensive resource details the essentials of bleeding and thrombotic disorders and the management of patients with these and related problems, and delivers the most up-to-date information on normal biochemistry and function of platelets or endothelial cells, as well as in-depth discussions of the pharmacology of anticoagulant, fibrinolytic, and hemostatic drugs. NEW to the Sixth Edition... • A new team of editors, each a leader in his field, assures you of fresh, authoritative perspectives. • Full color throughout • A companion website that offers full text online and an image bank. • A new introductory section of chapters on basic sciences as related to the field • Entirely new section on Hemostatic and Thrombotic Disorders Associated with Systemic Conditions includes material on pediatric patients, women's health issues, cancer, sickle cell disease, and other groups. • Overview chapters preceding each section address broad topics of general importance. This is the tablet version which does not include access to the supplemental content mentioned in the text.

It is a casebook on patent law that involves comparative jurisprudence tailored for India. The book is best described by highlighting the following features: (1) Casebook format - The casebook format suits practitioners and judges. It allows the reader to independently interpret and assess the implication of each caselaw, which forms a vital component of the practice of law. The reader is assisted towards this objective by only containing extracts of the relevant portions of the judgment. Even from an academic perspective, it provides an unfiltered view of the law, better than any unnecessary prose. (2) Comparative approach - For each topic of patent law, the book would provide a single point congregation of the relevant Indian provisions and extracts from relevant caselaw across India, the UK, the EU and the USA. This approach is ideal for India, where jurisprudence on the subject is limited. Courts, practitioners, and the Patent Office often resort to such a comparative approach to learn from the experiences of other jurisdictions. (3) Notes - Author's notes before and after each caselaw or topic fulfil four purposes: (i) set the context for the read-

er; (ii) critique the caselaw or to bring focus on to issues that arise in practice; (iii) contextualize the discussion to the Indian statute; and (iv) examine the historical perspective, including the legislative history. (4) Focus on law - it is a no-nonsense, no-rhetoric book, focussing on the law, its interpretation and application.

Scientific Study from the year 2005 in the subject Computer Science - Commercial Information Technology, grade: 1,3, Johannes Gutenberg University Mainz (Chair for Commercial Information Technology), 29 entries in the bibliography, language: English, abstract: In winter semester 2003/04 a seminar working paper about the 'relevance of the laboratory experiment in MIS research' was generated, based on an empirical literature study. One result was that this method is generally established within information systems in the English-speaking language area (especially in the data modeling domain and the formal versus non-formal contestation). But surprisingly practically no experimental studies could be found, using the laboratory experiment as research method in process modeling. Based on this cognition, in summer semester 2004 the project EXPEND (Experimental Study of using Petri nets and EPC from the End-user Perspective) was started, intending to realize an experimental study just in that research environment. As a framework for the further study, a comparison of the two process modeling languages EPC and Petri nets (in particular C/E nets) from the end-user perspective was given. Another important target for the study is, in addition to the principle realization of an empirical laboratory experiment, to prove or disprove some of the most prominent hypothesis in the theoretical literature discussion between the supporters of the semiformal EPC and the formal Petri nets. Their theoretical background, justification and transfer to provable hypothesis form the following theoretical framework chapter 2. Because using the laboratory experiment in the data modeling research provides a set of similarities, the approaches from GREEN, PETRE and BELLAMY and from MOHER, MAK and BLUMENTHAL provided a basic proceeding guideline for the study on hand. Both workgroups compared the comprehensibility of Petri nets against textual program representations within a laboratory experiment. Chapter 3 illustrates the specific experimental design used for the study on hand. In chapter 4, the results of the data analysis and statistical tests for the particular hypothesis are illustrated and discussed. The over-all concluding and comprising discussion forms the closing

chapter 5.

It is a comprehensive treatise on Water Resources Development and Irrigation Management. For the last 30 years the book

has enjoyed the status of a definitive textbook on the subject. It has now been thoroughly revised and updated, and thus substantially enlarged. In addition to the wholesale revision of the existing chapters, three new chapters have been added to the book, namely, "Lift Irrigation Systems and their Design", "Water Requirement of Crops and Irrigation Management", and "Economic Evaluation of Irrigation Projects and Water Pricing Policy".

In Asia, Distance Education (DE) is providing major solutions in the areas of education and training. DE methods that are standard in other parts of the world, however, have yet to demonstrate their full potential in Asia. Covering nine DE projects by 39 researchers from 13 countries, this book analyses the DE scenario in Asia, the successes, the failures and the reasons behind them. This book is a unique collation of the results of studies of educational technologies across an extensive network of Asian countries. It also provides a useful snapshot of DE's development in Asia in the early years of the 21st century. The surveys reported cover different DE contexts, methodologies, and levels of generalisability, and add to the existing scholarship on the subject by providing previously unavailable, firm evidence about DE's prospects in Asia. The contributors give important recommendations that can be translated into practical and political actions to help solve critical socio-economic problems of Asia as well as other parts of the world.

An academic work, this volume examines patent and intellectual property laws with reference to the biotechnical industries in both Europe and the United States.

Assesses the evidence that three marketed gene expression-based assays improve

prognostic accuracy, treatment choice, and health outcomes in women diagnosed with early stage breast cancer. Three gene expression assays were evaluated; Oncotype DX_z, MammaPrint® and the Breast Cancer Profiling (BCP or H/I ratio) test, and for gene expression signatures underlying the assays. They sought evidence on: analytic performance of tests; clinical validity; clinical utility; harms; and impact on clinical decision making and health care costs. Conclusions: Oncotype DX is furthest along the validation pathway, with retrospective evidence that it predicts distant spread and chemotherapy benefit to a clinically relevant extent over standard predictors. Modern Intellectual Property Law combines coverage of each intellectual property right granted for creations of the mind into a thoughtful, unified textbook. Deconstructing the fundamental topics into short, clear sections separated by subheadings throughout, Colston and Galloway's text is the ideal student companion to this intriguing area of the law. This third edition has been completely revised to bring it up to date with the latest debate and changes to the law. All significant recent developments are covered including the continuing controversy over patents for computer-implemented inventions and biotechnological inventions, the House of Lords' developments of patent law, the ECJ jurisprudence relating to trade mark dilu-

tion and comparative advertising, as well as the database right, and international efforts to reconcile copyright with peer-to-peer file sharing. This text also discusses the ongoing effort to achieve an appropriate balance between intellectual property and competition law in order to protect market competition while retaining key incentives to drive the process of innovation. Written for students, this accessible and comprehensive textbook provides the perfect starting point for anyone studying intellectual property law in the UK.

Much of the debate around the parameters of intellectual property (IP) protection relates to differing views about what IP law is supposed to achieve. This book analyses the object and purpose of international intellectual property law, examining how international agreements have been interpreted in different jurisdictions and how this has led to diversity in IP regimes at a national level.
