Radio's influence can be found in almost every corner of new media. Radio in the Digital Age assesses a medium that has not only survived the challenges of a new technological age but indeed has extended its reach. This is not a book about digital radio, but rather about the medium of radio in its many analogue and digital forms in an age characterised by digital technologies. The context of the digital age reveals new insights about the nature of radio. In this important addition to the world of radio scholarship, Dubber provides a theoretical framework for understanding the medium - allowing for complexity and contradiction, while avoiding essentialism and technological determinism. Introducing radio as a series of practices and phenomena that can be understood through a range of discursive categories, this book explores the relationships between radio, music, politics, storytelling and society in a new and thoughtful way. This book will make essential reading for students of media, communication, broadcasting and the digital industries. It offers a timely and comprehensive introduction for anyone who wishes to understand the role of radio in today's media landscape.

The New Global Marketing: Local Adaptation for Sustainability and Profit discusses the ways that marketing managers can assess the potential for global expansion and help their firms capitalize on opportunities. The book explores which companies and products should expand internationally, what countries offer the best opportunities, and which marketing plan will lead each product or company to success. The material adapts well-established frameworks to demonstrate how the global marketer can assess company strengths and weaknesses and analyze opportunities and risks in foreign markets. It discusses the proper balance between standardization and localization, and addresses the importance of the "triple" bottom line - environmental sustainability, social fairness, and financial performance. Students also learn about bottom-of-the-pyramid markets, the role of digital global

marketing, and the importance of adapting to international political, social, and environmental pressures. Featuring more than twenty original case studies, The New Global Marketing is an excellent introduction to what it really takes to succeed as a global marketer. Written for students with some marketing education and exposure to international business, the book is ideally suited to upper-level business courses and M.B.A. programs.

Modern scholarship dealing with the economy of the ancient world has developed rapidly in recent decades. Studies of ancient economic structures and history have in many respects achieved standards as a discipline comparable to those of economic history, using models and scenarios exactly as it is frequently seen in studies of later periods with better sources. The best example is perhaps the historical demography of Roman Italy. It was a marginal field of research until the early 1990s, but is now one of the key subjects in the study of Roman economy with a lively debate between the followers of a low count reconstruction of the demographic development in Roman Italy versus the scholars who favour a high count. Furthermore, quantitative studies have become serious scholarship and are no longer despised as only number games' as is apparent, for instance, from the new Oxford Roman Economy Project.' This is due to the great amount of published archaeological material such as terra sigillata, amphorae and shipwrecks. It is also illustrated by the shift from the predominant orthodoxy of the primitivism in the 1970s and 1980s to theoretical and methodological orientations inspired by the so-called New Institutional Economics and a diversity of approaches. But it has also rightly been pointed out that the struggle between primitivists' and modernists' , which still, a century later, continues to haunt scholarly discussions, often under the revealing name of minimalists and maximalists, signifying that the problem has often wrongly been reduced to one of quantities, mainly of trade. All the chapters of this book were originally published as articles or contributions to proceedings of different conferences between 1990 and 2010.
