Breast anatomy. Each breast contains 15 to 20 lobes of glandular tissue, arranged like the petals of a daisy. The lobes are further divided into smaller lobules that produce milk for breast-feeding.

Even if you feel fine, you should still see your provider for regular checkups. These visits can help you avoid problems in the future. For example, the only way to find out if you have high blood pressure is to have it checked regularly. High blood sugar and high cholesterol levels also may not have any symptoms in the early stages. A simple blood test can check for these conditions.

The U.S. Preventive Services Task Force (USPSTF) recommends against screening for ovarian cancer in the general population. The USPSTF found fair evidence that although screening with serum CA-125 level or transvaginal ultrasonography can detect ovarian cancer at an earlier stage, earlier detection is likely to have a small effect, at best, on mortality from ovarian cancer.
