Genres across the Disciplines presents cutting edge, corpus-based research into student writing in higher education. Genres across the Disciplines is essential reading for those involved in syllabus and materials design for the development of writing in higher education, as well as for those investigating EAP. The book explores creativity and the use of metaphor as students work towards becoming experts in the genres of their discipline. Grounded in the British Academic Written English (BAWE) corpus, the text is rich with authentic examples of assignment tasks, macrostructures, concordances and keywords. Also available separately as a paperback.

Searle's theory of social reality is increasingly meeting with worldwide recognition, and is undoubtedly the most prominent theory of social ontology (at least in the post-analytical tradition), even if actual research in this domain is engaged in critical confrontation with it. Searle's approach continues to shape the debate, but his construction is more and more sharply dissected, both in its details and in its general assumptions. Furthermore, new perspectives, not rooted in the analytical...

To really nail the Science section of the ACT standardized exam, you have to understand basic principles of science - experimentation, data collection, numerical and graphic data analysis, and how to develop conceptual conclusions. Who better to write the test prep book than an engineer who loves science? Michael Cerro uses his background as a chemical engineer, chess player, and highly-impactful ACT tutor with years of test prep experience to write a book that offers a new approach to ACT Test Prep rooted in: LOGIC. He brings together copious opportunities to practice with sample problems at each strategic lesson, using customized questions that feel just like the real test. Michael has an ability to create essential teaching moments on each page, as you walk through the book; and you may even have fun doing it!Above all, his love of the exam and of science ensure that anyone who uses this book - from teachers to tutors to students - will master the ACT Science section as well as gain a valuable understanding about the world of science that will be beneficial throughout life.

In ten papers Odyssey Marine Exploration presents the technology, methodology and archaeological results from four deep-sea shipwrecks and one major survey conducted between 2003 and 2008. The sites lie beyond territorial waters in depths of up to 820 metres off southeastern America and in the Straits of Gibraltar and the English Channel. Exclusively recorded using robotic technology in the form of a Remotely-Operated Vehicle, the wrecks range from the major Royal Navy warships HMS Sussex (1694) and the unique, 100-gun, first-rate HMS Victory (1744)to the steamship SS Republic (1865) and a mid-19th century merchant vessel with a cargo of British porcelain. Their study reveals that the future of deep-sea wreck research has arrived, but also that many sites are at severe risk from destruction from the offshore fishing industry.

not only of undergraduate and equivalent students, but of the new graduate entering industry and facing new and potentially frightening situations. To this end, the book is structured to meet the requirements both ofthe student, with a basic knowledge ofchemistry, biochemistry and microbiology and of persons working in the dairy industry. The basic approach isto discuss the manufacturing-process in thecontextof technology and its related chemistry and microbiology, followed by a more fundamental appraisal of the underlying science. The dairy industry is defined in a broad context and information is included on imitationproducts and analogues. Anumber ofinnovations have been adopted in the presentation ofthe book. Information boxes and • points are used to place the text in a wider scientific and commercial context, and exercises are included in most chapters to encourage the reader to apply the knowledge gained from the book to unfamiliar situations. It is also our firm beliefthat the control of food manufacturing processes should be considered as an integral partofthe technology and for this reason control points, based on the HACCPsystem, are included-where appropriate. A note on using the book EXERCISES Exercises are not intended to be treated like an examination question. Indeed in many cases there is no single correct, or incorrect, answer. This volume of specially commissioned articles examines theory and practice in EAP.

"Never has a President of the United States, or any head of state for that matter, been so totally revealed, so completely documented" (Robert A. Arthur). Plain Speaking is the bestselling book based on conversations between Merle Miller and the thirty-third President of the United States, Harry S. Truman. From these interviews, as well as others who knew him over the years, Miller transcribes Truman's feisty takes on everything from his personal life, military service, and political career to the challenges he faced in taking the office during the final days of World War II and the beginning of the Cold War. Using a series of taped discussions from 1962 that never aired on television, Plain Speaking takes an opportunity to deliver exactly how Mr. Truman felt about the presidency, and his thoughts in his later years on his accomplishments and the legacy he left behind. "The values of Plain Speaking, on the whole, are those of the highest form of political communication: the bull session. As with all good bull sessions, what is said here ranges widely in quality and seriousness, as one should expect when dealing with a complex man." —The New York Times "Plain Speaking has a nostalgic, downhome quality of good friends gossiping over the back fence, or saying their piece of a twilight eve rocking on the porch—and if those fellas back in Washington have their secret machines running, well, they won't like what they overhear. Not one little bit." —Kirkus Reviews

Five friends receive a pendant from a gypsy along with a prophecy that whoever wears the necklace will win the heart of a duke. With varying expectations, each girl accepts her turn with the good luck charm and a chance at happily-ever-after, secretly fearing the gypsy's tale may be nothing more than a plot to sell them a worthless piece of jewelry.

By using this guide, students can feel comfortable and confident that they are preparing to do their best! Features of the ACT® Official Science Guide Includes: Understand the detailed breakdown of each science reporting category; Learn how to quickly and efficiently read graphs, charts, and data; Review the science vocabulary section with words you should know to success; In-depth examples of each passage type using official ACT samples; Detailed solutions and explanations for every official ACT science question in the book.

Proposes a new empirical model to analyse how humans can express social cognition at different levels of complexity.

Nature's Economy is a wide-ranging investigation of ecology's past, first published in 1994.

University students must cope with a bewildering array of registers, not only to learn academic content, but also to understand course expectations and requirements. While many previous studies have investigated academic writing, we know comparatively little about academic speech; and no linguistic study to date has investigated the range of academic and advising/management registers that students encounter. This book is a first step towards filling this gap. Based on analysis of the T2K-SWAL Corpus, the book describes university registers from several different perspectives, including: vocabularly patterns; the use of lexico-grammatical and syntactic features; the expression of stance; the use of extended collocations ('lexical bundles'); and a Multi-Dimensional analysis of the overall patterns of register variation. All linguistic patterns are interpreted in functional terms, resulting in an overall characterization of the typical kinds of language that students encounter in university registers: academic and non-academic; spoken and written.

This volume seeks to show how realist social research allows us to make genuine discoveries, of relevance to social policy, which recognise the complexity of the real world.

Similarities and differences between speech and writing have been the subject of innumerable

studies, but until now there has been no attempt to provide a unified linguistic analysis of the whole range of spoken and written registers in English. In this widely acclaimed empirical study, Douglas Biber uses computational techniques to analyse the linguistic characteristics of twenty three spoken and written genres, enabling identification of the basic, underlying dimensions of variation in English. In Variation Across Speech and Writing, six dimensions of variation are identified through a factor analysis, on the basis of linguistic co-occurence patterns. The resulting model of variation provides for the description of the distinctive linguistic characteristics of any spoken or written text andd emonstrates the ways in which the polarization of speech and writing has been misleading, and thus enables reconciliation of the contradictory conclusions reached in previous research.

"This invaluable book brings empirical rigour to a debate that is too often emotive, polarised and selective in its approach to the facts. By examining how the Prevent duty is enacted in practice, the authors provide a sound evidence base for future policy development." -- David Anderson QC, House of Lords, and former Independent Reviewer of Terrorism Legislation "This book is crucial reading for at least three audiences: first, policy makers who are revising counter-terror and Prevent type strategies, second, those making judgements on Prevent enactment such as OFSTED, and third, those involved in training around extremism and radicalisation in schools. The book reveals what teachers and students actually want to know in this contested and complex area. It is an impressive read." --Lynn Davies, Birmingham University, UK and Director of ConnectFutures This open access book explores the enactment, impact and implications of the Prevent Duty across a range of educational contexts. In July 2015 the UK became the first country to place a specific legal requirement on those working in education to contribute to efforts to 'prevent people from being drawn into terrorism. Drawing on extensive research with staff, children and young people, the editors and contributors provide new insight into how this high-profile - and highly contentious - policy has shaped educational practice in Britain today. It will be a valuable resource for researchers, policymakers and others interested in the design, implementation and on-the-ground effects of Prevent or similar programmes internationally that place education at the heart of efforts to prevent or counter violent extremism. Joel Busher is Associate Professor at the Centre for Trust, Peace and Social Relations at Coventry University, UK. Lee Jerome is Associate Professor of Education at Middlesex University, UK.

In 1990 Seahawk Deep Ocean Technology of Tampa, Florida, commenced the world's first robotic archaeological excavation of a deep-sea shipwreck south of the Tortugas Islands in the Straits of Florida. At a depth of 405 meters, 16,903 artefacts were recovered using a Remotely-Operated Vehicle. The wreck is interpreted as the Buen Jesús y Nuestra Señora del Rosario, a small Portugue-
