An impassioned look at games and game design that offers the most ambitious framework for understanding them to date. As

pop culture, games are as important as film or television—but game design has yet to develop a theoretical framework or critical vocabulary. In *Rules of Play* Katie Salen and Eric Zimmerman present a much-needed primer for this emerging field. They offer a unified model for looking at all kinds of games, from board games and sports to computer and video games. As active participants in game culture, the authors have written *Rules of Play* as a catalyst for innovation, filled with new concepts, strategies, and methodologies for creating and understanding games. Building an aesthetics of interactive systems, Salen and Zimmerman define core concepts like "play," "design," and "interactivity." They look at games through a series of eighteen "game design schemas," or conceptual frameworks, including games as systems of emergence and information, as contexts for social play, as a storytelling medium, and as sites of cultural resistance. Written for game scholars, game developers, and interactive designers, *Rules of Play* is a textbook, reference book, and theoretical guide. It is the first comprehensive attempt to establish a solid theoretical framework for the emerging discipline of game design.

This book provides unique conceptual tools needed to analyze such processes, highlighting the effectiveness of ANT in fostering collaborations between governments, organizations and society.

Information Law Series #48 About this book: Imposing Data Sharing among Private Actors is a vital book shedding light on the nature of certain economic and societal balancing exercises required for any compulsory business-to-business (B2B) data-sharing initiatives because data sharing involves both benefits and potential costs. While the economic value originating from data sharing seems evident, identifying the legal framework to be applied

to it is a challenge. This is due to the multiple claims and rights aimed at controlling, accessing or benefiting from data processing. What's in this book: Whether these initiatives pursue economic, societal or empowerment objectives, their potential benefits must be balanced with the following three considerations that are extensively investigated in the book: the economic interests of the data holder; personal data protection considerations; and long-term and collective costs in terms of individual autonomy. The analysis elucidates how these aspects have been factored into existing compulsory B2B data-sharing initiatives so far (particularly in Europe), and on how they may be used as a source of inspiration in future initiatives. Insightful suggestions on the implementation of these balancing exercises conclude the volume. How this will help you: Based on law and literature in competition, personal data protection and intellectual property, the book greatly highlights the necessary balances underlying compulsory B2B data sharing and raises awareness about the crucial need to take the risks involved into consideration. It will be highly appreciated by policymakers, academics and private actors interested in issues linked to competition law in the digital environment, regulation of platforms, data governance or the interaction between competition law and personal data protection law.

Arthur Lessac's *Embodied Actor Training* situates the work of renowned voice and movement trainer Arthur Lessac in the context of contemporary actor training. Supported by the work of Constantin Stanislavsky and Maurice Merleau-Ponty's theories of embodiment, the book explores Lessac's practice in terms of embodied acting, a key subject in contemporary performance. In doing so, the author explains how the actor can come to experience both skill and expression as a subjective whole through active meditation and spatial attunement. As well as feeding this psychophysical approach into a wider discussion of embodiment, the book provides concrete examples of how the practice can be put into effect. Using insights gleaned from interviews conducted with Lessac and his Master Teachers, the author enlightens our own understanding of Lessac's practices. Three valuable appendices enhance the reader's experience. These include: a biographical timeline of Lessac's life and career sample curricula and a lesson plan for teachers at university level explorations for personal discovery. Melissa Hurt is a Lessac Certified Trainer and has taught acting and Lessac's voice, speech, and movement work at colleges across the United States. She has a PhD from the University of Oregon and an MFA from Virginia Commonwealth University.

"This book investigates "Who is a normative foreign policy actor?" It forms part of a new project intended to explore fundamental aspects of foreign policy at the global level, against the backdrop of a proliferation of global actors in the 21st century, following half a century with only one undisputed global hegemon: the United States. The European Union is itself a new or emerging foreign policy actor, driven by self-declared normative principles. But Russia, China and India are also increasingly assertive actors on the global stage and similarly claim to be driven by a normative agenda. The fundamental question explored is how will these various global actors define their foreign policy priorities, and how they will interact, especially if their ideas of normative behaviour differ?"--BOOK JACKET.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.
