Alcohol can be an item of diet, a medicine, sometimes an element in religious ritual. It is a valued object for the connoisseur, a traded commodity and a symbol of national pride (wine for instance in France, whisky in Scotland). The range of social and medical problems associated with alcohol and the history of related treatment methods (including the temperance movement, prohibition, AA and a range of contemporary approaches) are considered here. Already considered a classic in the field in England, Alcohol has proved to be fascinating reading for drinkers and nondrinkers alike.

It concentrates on processing technology, blending plant science, chemical engineering, microbiology, biochemistry, & chemical engineering with unit processing of alcohol from substrate selection & processing through fermentation to the purification of ethanol & the coproducts distillers grain & carbon dioxide.

All around the world, the public's taste for fermented cider has been growing more rapidly than at any time in the past 150 years. And with the growing interest in locally grown and artisanal foods, many new cideries are springing up all over North America, often started up by passionate amateurs who want to take their cider to the next level as small-scale craft producers. To make the very best cider—whether for yourself, your family, and friends or for market—you first need a deep understanding of the processes involved, and the art and science behind them. Fortunately, *The New Cider Maker's Handbook* is here to help. Author Claude Jolicoeur is an internationally known, award-winning cider maker with an inquiring, scientific mind. His book combines the best of traditional knowledge and techniques with up-to-date, scientifically based practices to provide today's cider makers with all the tools they need to produce high-quality ciders. *The New Cider Maker's Handbook* is divided into five parts containing: An accessible overview of the cider making process for beginners; Recommendations for selecting and growing cider-appropriate apples; Information on juice-extraction equipment and directions on how to build your own grater mill and cider press; A discussion of the most important components of apple juice and how these may influence the quality of the cider; An examination of the fermentation process and a description of methods used to produce either dry or naturally sweet cider, still or sparkling cider, and even ice cider. This book will appeal to both serious amateurs and professional cider makers who want to increase their knowledge, as well as to orchardists who want to grow cider apples for local or regional producers. Novices will appreciate the overview of the cider-making process, and, as they develop skills and confidence, the more in-depth technical information will serve as an invaluable reference that will be consulted again and again. This book is sure to become the definitive modern work on cider making. A mechanical engineer by profession, Claude Jolicoeur first developed his passion for apples and cider after acquiring a piece of land on which there were four rows of old abandoned apple trees. He started making cider in 1988 using a "no-compromise" approach, stubbornly searching for the highest possible quality. Since then, his ciders have earned many awards and medals at competitions, including a Best of Show at the prestigious Great Lakes International Cider and Perry Competition (GLINTCAP). Claude actively participates in discussions on forums like the Cider Digest, and is regularly invited as a guest speaker to events such as the annual Cider Days festival in western Massachusetts. He lives in Quebec City.

"Nineteen Eighty-Four: A Novel", often published as "1984", is a dystopian social science fiction novel by English novelist George Orwell. It was published on 8 June 1949 by Secker & Warburg as Orwell's ninth and final book completed in his lifetime. Thematically, "Nineteen Eighty-Four" centres on the consequences of totalitarianism, mass surveillance, and repressive regimentation of persons and behaviours within society. Orwell, himself a democratic socialist, modelled the authoritarian govern-

ment in the novel after Stalinist Russia. More broadly, the novel examines the role of truth and facts within politics and the ways in which they are manipulated. The story takes place in an imagined future, the year 1984, when much of the world has fallen victim to perpetual war, omnipresent government surveillance, historical negationism, and propaganda. Great Britain, known as Airstrip One, has become a province of a totalitarian superstate named Oceania that is ruled by the Party who employ the Thought Police to persecute individuality and independent thinking. Big Brother, the leader of the Party, enjoys an intense cult of personality despite the fact that he may not even exist. The protagonist, Winston Smith, is a diligent and skillful rank-and-file worker and Outer Party member who secretly hates the Party and dreams of rebellion. He enters into a forbidden relationship with a colleague, Julia, and starts to remember what life was like before the Party came to power.

Allen Carr's Easyway method (for stopping smoking) has been applied to problem drinking. By explaining why you feel the need to drink and with simple step-by-step instructions to set you free, he shows you how to escape from the alcohol trap.

Written by international leaders in the field of alcoholism, this book provides an interdisciplinary source of information on alcoholism that links together science, policy, and public health in order to emphasise the importance of scientific knowledge with deciding public health policy.

This title is out of print as of 03/02/2005. A new revised and updated edition: *Secrets of Methamphetamine Manufacture*, 7th Edition, will be available as of 03/08/2005.

There is no such thing as an alcoholic and there is no such disease as alcoholism! (as society understands it). Whether you agree with this statement or not, one thing is for sure, you will never see alcohol in the same light ever again after reading this book. Jason Vale takes an honest and hard hitting look at people's conceptions of our most widely consumed drug. Jason's major argument is there is no such thing as an 'alcoholic' and that we are conditioned to accept alcohol as a 'normal' substance in today's society despite the fact that it is the major cause of many of today's social problems and a wide range of health issues. This book is much more than a simple eye opener, it will: change the way you see alcohol forever; show you how to stop drinking; help you enjoy the process and enjoy your life so much more than you do now without having to drink alcohol. So open your mind and take a journey with Jason to explore the myths about the most used and accepted drug addiction in the world!

We are a nation that loves to drink. And we're passing the habit on to our children. But a growing body of compelling new evidence about the dangers of alcohol consumption at a young age will force us to reconsider the entire way we view alcohol and young people. As parents, we need to talk to our children about alcohol but many of us are not sure what to say. In this essential book, Dr Aric Sigman ties up all the latest medical research and cultural issues and puts them into context. Most importantly he addresses drinking not just as a teenage problem but as an integral part of our history and culture. It will lead us to understand how the way we view alcohol impacts directly upon our children's present and future health, wellbeing and academic success, and it will answer the question, 'how can I reconcile my enjoyment of drinking with ensuring my child grows up knowing how to drink sensibly?'

In the treatment of addictions and their psychological understanding, cognitive-behavioural and motivation approaches have been paramount. In contrast, the psychodynamic contribution has been muted. This book redresses this imbalance by bringing together a team of senior clinicians with psychotherapeutic backgrounds as well as extensive experience in addiction. Stress is placed on the diversity of psychodynamic understanding and its relevance to the everyday problems met by addicted individuals. The first theoretical part of the book is followed by examples from group and individual therapy, and the foreword is written by Dr Edward Khantzian. *The Psychodynamics of Addiction* will be of interest to psychotherapists who may lack experience in addiction, and to other clinicians working in the field - doctors, nurses and psychologists. For twenty years this book, now in its 5th edition, has provided information on adverse drug interactions that is unrivalled in coverage and scholarship. Adverse drug reactions, many of them ascribable to interactions with other drugs or with chemical substances in food or the environment, are thought to cause or complicate one in twenty of hospital admissions. The book is conveniently divided into two parts: Part 1 comments on drug interactions and their mechanisms, on a pharmacokinetic and pharmacodynamic level, while Part 2 consists of drug interaction tables, divided and subdivided into categories of disorders, and the drugs used in the treatment of these disorders. If safety in drugs is to improve, education of prescribers is vitally important. This book, with its up-to-date and coordinated approach, serves that purpose well. The real threat, as the authors remind us, is the ignorance of practitioners, not the drug itself. The volume is therefore an essential addition to the shelves of those responsible for the prescription of drugs, in order to prevent a potential backlash when used in combination with other drugs or chemical substances.
