WARNING: A tube amplifier chassis contains lethal high voltage

even when unplugged--sometimes over 700 volts AC and 500 volts DC. If you have not been trained to work with high voltage then have an amp technician service your amp. Never touch the amplifier chassis with one hand while probing with the other hand because a lethal shock can run between your arms through your heart.

The difference between a tube amp and a transistor amp, however, is that instead of using transistors, the tube amp uses vacuum tubes — or small tubes in which there's a vacuum. The basic concept is that a heated "cathode" burns off electrons from a filament — similar to a light bulb, except that in a vacuum tube has either thorium added to it or is oxide-coated.
