Phonetics of Signed Languages • Signs can be broken down into segmental features similar to the phonetic features of speech sounds (such as place and manner of articulation) – And just like spoken languages, signed languages of the world vary in these features – Signs are formed by three major features: • 1.

In the early months of life, infants acquire information about the phonetic properties of their native language simply by listening to adults speak. The acoustic properties of phonetic units in language input to young infants in the United States, Russia, and Sweden were examined. In all three countries, mothers addressing their infants produced acoustically more extreme vowels than they did ...
