

Download Free Ansal University And University Of Warwick Uk Sign Mou

Getting the books **Ansal University And University Of Warwick Uk Sign Mou** now is not type of inspiring means. You could not deserted going subsequent to ebook addition or library or borrowing from your contacts to entry them. This is an totally simple means to specifically get lead by on-line. This online pronouncement Ansal University And University Of Warwick Uk Sign Mou can be one of the options to accompany you like having further time.

It will not waste your time. undertake me, the e-book will categorically make public you supplementary event to read. Just invest tiny era to right to use this on-line proclamation **Ansal University And University Of Warwick Uk Sign Mou** as well as evaluation them wherever you are now.

4JEHIA - GAVIN MICAH

This book, the first volume, highlights 8 out of a total of about 36 megacities in the World which by definition have 10 million inhabitants. The cities/chapters presented in this book are based on recent advance such as the wide use of ICT, IOT, e-Governance, e-Democracy, smart economy and flattening and acceleration of the world that is taking place in recent times as reported by 3 times Pulitzer Prize Winner Thomas Friedman. It therefor departs from other ideologies where only a certain megacity qualifies for the title of smart global megacities while in reality every megacity can, and presents how smart global megacities can be created.

This volume brings together significant international research in technology education by focusing on contemporary postgraduate research, elaborating on the findings with the aim of making the content relevant to researchers, teachers and other potential researchers in the field. The book shares with readers what the research means for classroom teachers through understanding different motivations for teaching technology in schools and observing the model of learning supported by the research. Each chapter in the book includes references to the digital edition of the respective full thesis, allowing readers to consult the research in detail if necessary. This book continues the work done by 2017's Contemporary Research in Technology Education by the same editors.

Discussions surrounding inclusivity have grown exponentially in recent years. In today's world where diversity, equity, and inclusion are the hot topics in all aspects of society, it is more important than ever to define what it means to be an inclusive society, as well as challenges and potential growth. Those with physical and intellectual disabilities, including vision and hearing impairment, Down syndrome, locomotor disability, and more continue to face challenges of accessibility in their daily lives, especially when facing an increasingly digitalized society. It is crucial that research is brought up to date on the latest assistive technologies, educational practices, work assistance, and online support that can be provided to those classified with a disability. The Research Anthology on Physical and Intellectual Disabilities in an Inclusive Society provides a comprehensive guide of a range of topics relating to myriad aspects, difficulties, and opportunities of becoming a more inclusive society toward those with physical or intellectual disabilities. Covering everything from disabilities in education, sports, marriages, and more, it is essential for psychologists, psychiatrists, pediatricians, psychiatric nurses, clinicians, special education teachers, social workers, hospital administrators, mental health specialists, managers, academicians, rehabilitation centers, researchers, and students who wish to learn more about what it means to be an inclusive society and best practices in order to get there.

The application and interpretation of the four Geneva Conventions of 1949 and their two Additional Protocols of 1977 have developed significantly in the sixty years since the International Committee of the Red Cross (ICRC) first published its Commentaries on these important humanitarian treaties. To promote a better understanding of, and respect for, this body of law, the ICRC commissioned a comprehensive update of its original Commentaries. Its preparation was coordinated by Jean-Marie Henckaerts, ICRC legal adviser and head of the project to update the Commentaries. The First Convention is a foundational text of international humanitarian law. It contains the essential rules on the protection of the wounded and sick, those assigned to their care, and the red cross and red crescent emblems. This article-by-article Commentary takes into account developments in the law and practice to provide up-to-date interpretations of the Convention. The new Commentary has been reviewed by humanitarian-law practitioners and academics from around the world. It is an essential tool for anyone working or studying within this field.

Web service technologies are redefining the way that large and small companies are doing business and exchanging information. Due to the critical need for furthering automation, engagement, and efficiency, systems and workflows are becoming increasingly more web-based. Web Services: Concepts, Methodologies, Tools, and Applications is an innovative reference source that examines relevant theoretical frameworks, current practice guidelines, industry standards and standardization, and the latest empirical research findings in web services. Highlighting a range of topics such as cloud computing, quality of service, and semantic web, this multi-volume book is designed for computer engineers, IT specialists, software designers, professionals, researchers, and upper-level students interested in web services architecture, frameworks, and security.

This book emerges from the recognition that energy, environment

and ecosystems are dynamically and inextricably connected. The energy environment system must be addressed in its totality, so that we can devise sustainable solutions that incorporate both economic growth and environmental conservation. No single clean energy source will sustain long-term energy security, and fossil fuels will remain prominent in the mix of energy sources for several decades to come. Energy solutions, therefore, must employ a broad and diverse range of approaches, including cleaner fossil fuel technologies, and an affordable transition to greener power generation employing waste, water and renewable resources. Moreover, adapting to this changing global energy picture will require a transformational shift in the ways we use and deliver energy services. The authors begin with a broad introductory chapter on sustainable energy and the environment, classifying energy resources, cataloging environmental degradations, and outlining the concepts and practices of sustainability. In Chapters Two and Three, they summarize the basic constituents of the environment, the biosphere and its natural cycles, and offer a model of Earth's planetary temperatures and the greenhouse effect. Chapters Four and Five outline conventional energy and power systems, and related environmental degradations. The next several chapters cover clean coal technologies for power generation, and discuss sustainable energy and power technologies based on both thermal and photovoltaic solar energy, along with biomass and wind. The final chapters examine in depth the management of waste and water, pollution control and energy conservation. The book introduces a unique approach to sustainability and energy conservation which emphasizes the relationships between underlying scientific principles and practical applications employed in engineering solutions. All this is offered in a form that matches the requirements of college-level environmental science and engineering courses.

White collar crime is a significant issue for everyone; it is not a victimless crime. It has an intense impact on everyone, not just the victims directly, but for all consumers and taxpayers in the form of higher costs, larger insurance premiums, payments, fees, taxes, etc. Keeping in mind the above-stated facts this Book is composed as in the market very rare books are available to cover in detail about white collar crime at a glance. This book can successfully claim to be a change from the conventional method and it has covered all facets of White Collar Crime in India. The Chapters of the book were written by erudite Professors, and deans of different streams to articulate the application of White Collar Crime in divergent professions. In today's era when White Collar Crime is a burning issue in society, this book can help Researchers to extract information easily and to gain vast knowledge about it. Moreover, this book will be very helpful in both Text and Reference form and will generate a feeling among readers that "Make crime pay".

Though conflicts continue to arise over land use and land cover changes, the conversion of forest land to cropland or other land uses such as housing and urban development have been on the rise in recent years. Decisions regarding land use and land cover influence climate change as well as various natural processes. While proper changes can minimize the effects and speed of climatic changes, the continued adverse changes may be accelerating the deterioration of the world's condition. Examining International Land Use Policies, Changes, and Conflicts presents the latest research on the present status of land use and land cover changes throughout the world in order to determine appropriate land use policies that can protect earth's present and future condition. The findings of the studies investigate the conflicts behind the land tenure and land uses in different countries of the world and examines existing policies and the reasons behind changes in them. Ultimately, the book provides readers with knowledge on how land can be managed in a sustained manner, how landscape models are helpful for predicting and determining future land uses, how land can be managed with the best architectural measures, and how urban forestry is helpful for better environmental management and adapting or mitigating climate change effects. Land users, agriculturalists, urban planners, policymakers, government officials, researchers, academicians, and students looking to improve their understanding of this topic for better use of land in the future will find this book to be an asset to their current research.

This book discusses capital markets and investment decision-making, focusing on the globalisation of the world economy. It presents empirically tested results from Indian and Southwest Asian stock markets and offers valuable insights into the working of Indian capital markets. The book is divided into four parts: the first part examines capital-market operations, particularly clearance and settlement processes, and stock market operations. The se-

cond part then addresses the functioning of global markets and investment decisions; more specifically it explores calendar anomalies, dependencies, overreaction effect, causality effect and stock returns volatility in South Asia, U.S. and global stock markets as a whole. Part three covers issues relating to capital structure, values of firm and investment strategies. Lastly, part four discusses emerging issues in finance like behavioral finance, Islamic finance, and international financial reporting standards. The book fills the gap in the existing finance literature and helps fund managers and individual investors make more accurate investment decisions.

As technology continues to become more sophisticated, mimicking natural processes and phenomena becomes more of a reality. Continued research in the field of natural computing enables an understanding of the world around us, in addition to opportunities for manmade computing to mirror the natural processes and systems that have existed for centuries. Nature-Inspired Algorithms for Big Data Frameworks is a collection of innovative research on the methods and applications of extracting meaningful information from data using algorithms that are capable of handling the constraints of processing time, memory usage, and the dynamic and unstructured nature of data. Highlighting a range of topics including genetic algorithms, data classification, and wireless sensor networks, this book is ideally designed for computer engineers, software developers, IT professionals, academicians, researchers, and upper-level students seeking current research on the application of nature and biologically inspired algorithms for handling challenges posed by big data in diverse environments.

The book is about all aspects of computing, communication, general sciences and educational research covered at the Second International Conference on Computer & Communication Technologies held during 24-26 July 2015 at Hyderabad. It hosted by CMR Technical Campus in association with Division - V (Education & Research) CSI, India. After a rigorous review only quality papers are selected and included in this book. The entire book is divided into three volumes. Three volumes cover a variety of topics which include medical imaging, networks, data mining, intelligent computing, software design, image processing, mobile computing, digital signals and speech processing, video surveillance and processing, web mining, wireless sensor networks, circuit analysis, fuzzy systems, antenna and communication systems, biomedical signal processing and applications, cloud computing, embedded systems applications and cyber security and digital forensic. The readers of these volumes will be highly benefited from the technical contents of the topics.

In recent years, technological advances have led to significant developments within a variety of business applications. In particular, data-driven research provides ample opportunity for enterprise growth, if utilized efficiently. Privacy and Security Policies in Big Data is a pivotal reference source for the latest research on innovative concepts on the management of security and privacy analytics within big data. Featuring extensive coverage on relevant areas such as kinetic knowledge, cognitive analytics, and parallel computing, this publication is an ideal resource for professionals, researchers, academicians, advanced-level students, and technology developers in the field of big data.

When online learning began more than two decades ago, many universities envisioned the creation of international student markets, but this has only recently become a reality. The emergence of a global economy, advances in technology, increased market competition, reduced funding, and the growing desire for degrees from internationally recognized universities have created opportunities that promote transnational degrees. Transnational Distance Learning and Building New Markets for Universities presents the opportunities, methods, issues, and risks involved in extending university education across national borders. It is important to understand cultural, financial, and legal issues, as well as management approaches, academic delivery options, and business considerations needed to create quality programs that are marketable and cost effective in reaching emerging international markets. The purpose of the book is to review how to reach emerging international markets, increase access to education, and do so at a profit.

Due to the growing use of web applications and communication devices, the use of data has increased throughout various industries, including business and healthcare. It is necessary to develop specific software programs that can analyze and interpret large amounts of data quickly in order to ensure adequate usage and predictive results. Cognitive Analytics: Concepts, Methodologies, Tools, and Applications provides emerging perspectives on the theoretical and practical aspects of data analysis tools and tech-

niques. It also examines the incorporation of pattern management as well as decision-making and prediction processes through the use of data management and analysis. Highlighting a range of topics such as natural language processing, big data, and pattern recognition, this multi-volume book is ideally designed for information technology professionals, software developers, data analysts, graduate-level students, researchers, computer engineers, software engineers, IT specialists, and academicians.

This book, based on international collaborative research, presents a state-of-the-art design for "Smart Master Planning" for all metropolises, megacities and meta cities as well as at sub-city zonal and community and neighborhood level. Smart Master Planning accepts that all cities are a smart city in making in a limited way as far as the six components for Smart Cities; namely, smart people, smart economy, smart environment, smart mobility and smart Governance are concerned. Smart Master Planning in any city can only be designed and executed by active roles of Smart People and Smart City Government and is a joint and synchronous effort of E-Democracy, E-Governance and ICT-IOT system in a 24 hour 7-day framework on all activities. In addition to use of Information and Communication Technologies, and Remote Sensing, the design of smart Master Planning utilizes domain specific tools of many aspects of a city to realize the coordinated, effective and efficient planning, management, development and conservation that improve ecological, social, biophysical, psychological and economic well-being in an equitable manner without compromising the sustainability of development ecosystems and stakeholders. This book will present 12 case studies covering more than 12 cities or more cities centered on domain-specific smart planning components. Case studies of Domain Innovations include Urban Land management, Master Planning for Water Management, Comprehensive Master Planning Innovations, Smart Use of Master Plan basics, Integrated Smart Master Planning, and Citizen-Centric Master Planning.

Designing buildings and physical environments depends on social structure, social needs, economic data, environment, and technological development. Planning these environments is heavily influenced by cultural and regional need, the existing environment, and the materials available. Reusable and Sustainable Building Materials in Modern Architecture is an essential reference source that discusses the shaping of building design through culture and materials as well as the influence of environment on building design. Featuring research on topics such as passive design, ecological design, and urban design, this book is ideal for academicians, specialists, and researchers seeking coverage on culture, environment, and building design.

Focusing on the challenges, directions, and future predictions with the role of 5G in smart healthcare monitoring, this book offers the fundamental concepts and analyses on the methods to apply Internet of Things (IoT) in monitoring devices for diagnosing and transferring data. It also discusses self-managing to help providers improve their patients' healthcare experience. Smart Healthcare Monitoring Using IoT with 5G: Challenges, Directions, and Future Predictions illustrates user-focused wearable devices such as Fit-bit health monitors and smartwatches by which consumers can self-manage and self-monitor their own health. The book covers new points of security and privacy concerns, with the expectation of IoT devices gaining more popularity within the next ten years. Case studies depicting applications and best practices as well as future predictions of smart healthcare monitoring by way of a 5G network are also included. Interested readers of this book include anyone working or involved in research in the field of smart healthcare, such as healthcare specialists, computer science engineers, electronics engineers, and pharmaceutical practitioners.

This new book focuses on the important concern of sustainability in tourism and hospitality industry. As the world's natural resource base is limited, the world is looking for solutions in the domains of energy, water, alternate building materials, resource re-deployment, and sustainable livelihoods as well. The tourism and hospitality industry is a large deployer of natural and created resources. Some of the themes the book addresses include: designing sustainable restaurants sustainable accommodation practices designing green hotels energy conservation in hotels- a Green Approach technology and sustainability marketing sustainability to consumers sustainable culinary practices sustainable employee practices sustainable equipment design for the hospitality industry sustainable tourism practices sustainable transport practices sustainable tourism destinations/cities The book takes sustainability beyond the realms of external factors that matter to an organization. The authors look at various constituents of the hospitality sector and analyze each of those from a sustainability standpoint. The book includes case studies that are global in nature and that show how sustainable applications can be used and how concerns can be addressed. Environmental challenges are also discussed. This book is futuristic with lot of practical insights for the students, faculty, and practitioners. Since the contributors are from across the globe, it is fascinating to see the global benchmarks.

A life changing guide for professional greatness. This book is very helpful for the youngsters for the better career planning and selecting the right goal to make their life. This book also containing the admission processes of various best colleges and after that courses what will be their requirement of work nature of their job.

It has been concise and beautiful, but the information is inextricably inextricable and needs to be expressed in details; You will be able to know - Various type of the courses available in India and abroad. Nature of courses, personality required Best colleges for different courses in India How to get scholarship to study in USA, UK and AustReasons and Laughteria and many more.

This book is about containment, life, work, and restart cities affected by COVID 19, using selected empirical case studies. This book presents the spread of coronavirus spatially and temporally, analyses containment strategies and includes recommended strategies. Further, it analyses how life and work get transformed during the lockdown, and gradual opening up, and presents the future of work and life in cities impacted by COVID-19. This book discusses the concept of smart life and works in cities post-COVID-19 such that they do not reduce the quality of work and life and cannot create adverse economic and living consequences called the restart of a city after COVID-19. Selected Cities of special interest are studied. Special interest is because Kerala and Maharashtra got the worst affected in India by COVID 19 pandemic and the book focus on that.

#####

Choosing the right career is critical to success in one's life. Overload of information on Internet only serves to confuse an already confused mind. This book provides information about jobs and educational openings for 10+2, graduates and post graduates in technical, professional, science, commerce and arts faculty. Questionnaire helps the students to gauge his interests, abilities, aptitudes and opportunities to facilitate proper selection of job or study.

This journal has been discontinued. Any issues are available to purchase separately.

Computational intelligence (CI) refers to the ability of computers to accomplish tasks that are normally completed by intelligent beings such as humans and animals. Artificial intelligent systems offer great improvement in healthcare systems by providing more intelligent and convenient solutions and services assisted by machine learning, wireless communications, data analytics, cognitive computing, and mobile computing. Modern health treatments are faced with the challenge of acquiring, analysing, and applying the large amount of knowledge necessary to solve complex problems. AI techniques are being effectively used in the field of healthcare systems by extracting the useful information from the vast amounts of data by applying human expertise and CI methods, such as fuzzy models, artificial neural networks, evolutionary algorithms, and probabilistic methods which have recently emerged as promising tools for the development and application of intelligent systems in healthcare practice. This book starts with the fundamentals of computer intelligence and the techniques and procedures associated with them. Contained in the book are state-of-the-art CI methods and other allied techniques used in healthcare systems as well as advances in different CI methods that confront the problem of effective data analysis and storage faced by healthcare institutions. The objective of this book is to provide the latest research related to the healthcare sector to researchers and engineers with a platform encompassing state-of-the-art innovations, research and design, and the implementation of methodologies.

This book gathers selected papers presented at the International Conference on Innovations in Information and Communication Technologies (ICIICT 2022), held in Thailand during April 15-16, 2022. It presents the works on the intersection of the Computer Science and Communication Engineering. Topics covered in the book include communications engineering, Internet and web technology, computer and information science, artificial intelligence, data science and management, and ICT applications.

This book covers all aspects of modern finance relating to portfolio theory and risk-return relationship, offering a comprehensive guide to the importance, measurement and application of the risk-return hypothesis in portfolio management. It is divided into five parts: Part I discusses the valuation of capital assets and presents various techniques and models used in this context. Part II then addresses market efficiency and capital market models, particularly focusing on measuring market efficiency, which is a crucial factor in making correct investment decisions. It also analyzes the major capital market models like CAPM and APT to determine to what extent they are suitable for use in developing economies. Part III highlights the significance of risk-return analysis as a prerequisite for investment decisions, while Part IV examines the selection and performance appraisals of portfolios against the backdrop of the risk-return relationship. It also examines new tools such as the value-at-risk application for mutual funds and the applications of the price-to-earnings ratio in portfolio performance measurement. Lastly, Part V explores contemporary issues in finance, including the relevance of Islamic finance in the increasingly volatile global financial system.

The advent of the internet largely changed the landscape of marketing to adopt a wide variety of communication techniques and creative selling on virtual platforms. Gaming provides a highly pervasive and influential mode of offering new media communication to consumers that can be further improved by digital innovation. Application of Gaming in New Media Marketing is a collection of vital research on the methods and applications of gaming in marketing, including its growth, recent trends, practices, issues, and main challenges. Highlighting a range of topics including digital advertising, media planning, and social media marketing, this book is ideally designed for marketers, software developers, managers, business researchers, academicians, and graduate-level students seeking current research on new and innovative methods to reach and connect with audiences through games in a highly interactive, measurable, and focused way.

This book brings together the research work conducted by renowned academics and practitioners on critical and immensely important issues of virtual learning. It provides innovative ideas and empirical findings on the subject. The sixteen chapters by established and young scholars from all over the country offer strong theoretical and analytical discussion, and examine a wide range of issues confronting the education sector in India in general and the higher education sector in particular. The book seeks to address pertinent issues relating to virtual learning like emerging scenario with respect to required changes in pedagogy used in higher education learning, perceptions of learners about online mode of learning, problems and challenges in virtual learning, paradigm shifts in higher education, designing of new learning strategies for online mode of learning and about the role virtual learning plays in inclusive growth. The scholarly discussion of the book will serve as an excellent vade mecum for readers who want to understand the various dimensions of virtual learning, specifically those that emerged during the Covid-19 Pandemic period, and will provide opportunities to researchers to use it as reference to pursue research in the field of virtual learning.

Mirroring the complexities of cities and neighborhoods, this volume makes a conscious departure from consensus-oriented public participation to conflict-resolving public participation. In India, planning practice generally involves citizens at different stages of plan-making with a clear purpose of securing a consensus aimed at legitimizing the policy content of a development plan. This book contests and challenges this consensus-oriented view of citizen participation in planning, arguing against the assertion that cities can be represented by a single public interest, for which consensus is sought by planners and policy makers. As such, it replaces consensus-centered rational planning models with Foucauldian and Lacanian models of planning to show that planning is riddled with a variety of spatial conflicts, most of which are resolvable. The book does not downplay differences of class and social and cultural identities of various kinds built on arbitrarily assumed public interest created erroneously by further assuming that the professionally trained planner is unbiased. It moves from theory to practice through case studies, which widens and deepens opportunities for public participation as new arenas beyond the processes of preparation of development plans are highlighted. The book also argues that spaces of public participation in planning are shrinking. For example, city development plans promoted under the erstwhile JNNUM programme and several other neoliberal policy regime initiatives have reduced the quality, as well as the extent of participatory practices in planning. The end result of this is that legally mandated participatory spaces are being used by powerful interests to pursue the neoliberal agenda. The volume is divided into three main parts. The first part deals with the theory and history of public participation and governance in planning in India, and the second presents real-life case studies related to planning at a regional level in order to describe and empirically explore some of the theoretical arguments made in the first. The third section provides analyses of selected case studies at a local level. An introduction and conclusions, along with insights for the future, provide a coherent envelope to the book.

This book gathers selected papers presented at the International Conference on Innovations in Information and Communication Technologies (ICI2CT 2020), held at National University of Singapore, Singapore, during 18-19 December 2020. It presents the works on the intersection of the Computer Science and Communication Engineering. Topics covered in the book include communications engineering, Internet and web technology, computer and information science, artificial intelligence, data science and management, and ICT applications.

Globalization is characterized by a systemic interconnection in which what haplnequality has been on the rise across the globe and living conditions are vastly unequal between different places in the world. Currently, the richest 1% own 45% of the world's wealth. The consequence is that some people are able to enjoy healthy, wealthy, happy lives whilst others continue to live in ill-health, poverty and sorrow. Rapid economic growth in Asia (particularly China and India) has lifted many people out of extreme poverty. Nevertheless, the wealth divide is steadily growing. According to Oxfam, between 2009 and 2018, the number of billionaires it took to equal the wealth of the world's poorest 50 percent fell from 380 to 26. Those with extreme wealth have often accumulated their fortunes on the backs of people around the world

who work for poor wages and under dangerous conditions. Women are scarce at the top and overrepresented at the bottom. Gender discrimination in the workplace contributes significantly to these persistent economic divides. There are also large differences in wealth across racial groups. Long-standing racial discrimination in many forms, including in education, hiring, and pay practices contribute to persistent earnings gaps. Inequalities have dramatically strengthened the economic and political power of those individuals at the top.

The International Conference on ICT Innovations was held in September 2016, in Ohrid, Macedonia, with the main topic "Cognitive Functions and Next Generation ICT Systems". We live in the era where technologies are intimately woven into virtually all aspects of daily life and are becoming almost invisible. While these technologies have considerable benefits, they also have a number of shortcomings and unforeseen consequences. For example, on the one hand, bodily sensors that track physical activity, physiological parameters and sleep patterns can help promote healthy habits and can enable early detection of problems. On the other hand, attention spans are becoming shorter and shorter due to constant interruptions by notifications, emails, and instant messages being delivered to cell phones or watches, and similar disturbances. Moreover, the privacy issues involved in storing and manipulation of these data must not be neglected. The technological convergence of sciences that were considered separate in the past, like information and communication technologies, cognitive sciences, nanotechnologies and biotechnologies, determines not only our society, health and economy, but also our education and culture. The conference gathered academics, professionals and practitioners involved in developing solutions and systems in the industrial and business arena, especially innovative commercial implementations, to discuss novel applications of these next-generation, emerging technologies in the context of human cognitive functions.

The most awaited period of stepping out into college life is almost in front of you now. The choices that you make here will largely affect your entire future and life in general. So while one is readying oneself for life after twelfth, the dilemma about which college to choose and which course to choose from the wide array of ca-

reer streams available after twelfth also increases. This underscores the need for exploring the various career options available and their suitability with reference to the following: —Learning about you —Identifying your skills —Knowing your weakness —Utilizing your talents —Your career dreams

Developing economies around the world must balance fast growth with traditional values to achieve the greatest success. Issues related to rural innovation, knowledge management, and emerging technologies are at the forefront of every developing country's concerns. Promoting Socio-Economic Development through Business Integration builds on available literature in the field of socio-economic development in developing countries, providing further research opportunities in this field. Research scholars, academics, policymakers, government officials, and more will find this book to be a crucial source of knowledge to their respective disciplines.

This book constitutes the refereed proceedings of the Third International Conference on Soft Computing and its Engineering Applications, icSoftComp 2021, held in Changa, India, in December 2021. Due to the COVID-19 pandemic the conference was held online. The 29 full papers and 4 short papers presented were carefully reviewed and selected from 247 submissions. The papers present recent research on theory and applications in fuzzy computing, neuro computing, and evolutionary computing.

The Most Authentic Source Of Information On Higher Education In India The Handbook Of Universities, Deemed Universities, Colleges, Private Universities And Prominent Educational & Research Institutions Provides Much Needed Information On Degree And Diploma Awarding Universities And Institutions Of National Importance That Impart General, Technical And Professional Education In India. Although Another Directory Of Similar Nature Is Available In The Market, The Distinct Feature Of The Present Handbook, That Makes It One Of Its Kind, Is That It Also Includes Entries And Details Of The Private Universities Functioning Across The Country. In This Handbook, The Universities Have Been Listed In An Alphabetical Order. This Facilitates Easy Location Of Their Names. In Addition To The Brief History Of These Universities, The Present Handbook Provides The Names Of Their Vice-Chancellor, Professors And Readers As Well As Their Faculties And Departments. It Also Acquaints The Readers With The Various Courses Of Studies

Offered By Each University. It Is Hoped That The Handbook In Its Present Form, Will Prove Immensely Helpful To The Aspiring Students In Choosing The Best Educational Institution For Their Career Enhancement. In Addition, It Will Also Prove Very Useful For The Publishers In Mailing Their Publicity Materials. Even The Suppliers Of Equipment And Services Required By These Educational Institutions Will Find It Highly Valuable.

The book presents a collection of peer-reviewed articles from the International Conference on Innovations in Cyber Physical Systems (ICICPS 2020). The conference provided opportunities for the presentation of new research results and discussion about them. It was also an opportunity to generation of new ideas in all CPS aspects, including theory, tools, applications, systems, test-beds and field deployments. The range of topics explored is wide, and covers security, control, optimization, machine learning, game theory, mechanism design, mobile and cloud computing, model-based design, verification, data mining/analytics, signal processing, and human-in-the-loop shared or supervisory control. This book will be useful to researchers, students, industrialist, developers, and practitioners alike.

One of the most challenging obstacles for many businesses in successfully reaching a global market stems from cultural and language barriers and the lack of a clear understanding of this issue. It is critical for businesses to understand these cultural and language barriers and how to face them through effective communications and cultural sensitivity. The companies that will thrive and see the most success are the ones whose employees communicate and collaborate effectively with customers, suppliers, and partners all over the world. Breaking Down Language and Cultural Barriers Through Contemporary Global Marketing Strategies provides both empirical and theoretical research focused on ways that business professionals and organizations are breaking down cultural and language barriers, integrating cultural sensitivity, and implementing cross-cultural management practices into their daily business practices. Featuring research on topics such as origin effects, consumption culture, and cross-cultural management, managers, consultants, academic researchers, practitioners, business educators, and advanced students in various disciplines will find the content within this publication to be beneficial.
