State University People spontaneously evaluate things. We form opinions on topics such as war and climate change, on other people such as our work colleagues and celebrities, and on behaviours such as sexual activity and waste recycling. At times, these attitudes can be the focus of bitter debate, and as humans we naturally crave to understand attitudes and how to change them. In four sections and 11 chapters, Greg Maio and Geoffrey Haddock describe how scientific methods have been used to better understand attitudes and how they change. The first section looks at what attitudes are and why they are important. The second section examines the ability of attitudes to predict behaviour. From there, the authors consider how attitudes are formed and changed. Finally, they present a variety of major issues for understanding internal (such as, neurological) and external (such as, culture) influences on attitude, along with unresolved questions. With the aid of a few helpful metaphors, the text provides readers with a grasp of the fundamental concepts for understanding attitudes and an appreciation of the scientific challenges that lie ahead. *The Psychology of Attitudes and Attitude Change* is for students in psychology, health psychology, communication, business and political science. It is a core text for courses in the psychology of attitudes, persuasion, and social influence and a key resource for modules in social cognition and introductory social psychology

When Emmett Till was murdered aged fourteen for allegedly whistling at a white woman, photographs of his destroyed face became a flashpoint in the civil rights movement. A decade earlier Emmett's father, Louis, had also been killed – court-martialled and hanged. Though the circumstances could hardly have been

more different, behind both deaths stood the same crime, of being black. In *Writing to Save a Life*, John Edgar Wideman, born the same year as Emmett Till, investigates the tragic fates of father and son. Careers in astronomy for women (as in other sciences) were a rar-

ity in Britain and Ireland until well into the twentieth century. The book investigates the place of women in astronomy before that era, recounted in the form of biographies of about 25 women born between 1650 and 1900 who in varying capacities contributed to its progress during the eighteenth, nineteenth and early twentieth centuries. There are some famous names among them whose biographies have been written before now, there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members. All deserve to be remembered as interesting individuals in an earlier opportunity-poor age. Placed in roughly chronological order, their lives constitute a sample thread in the story of female entry into the male world of science. The book is aimed at astronomers, amateur astronomers, historians of science, and promoters of women in science, but being written in non-technical language it is intended to be of interest also to educated readers generally.

Global events of the early twenty-first century have placed new stress on the relationship among anthropology, governance, and war. Facing prolonged insurgency, segments of the U.S. military have taken a new interest in anthropology, prompting intense ethical and scholarly debate. Inspired by these issues, the essays in *Anthropology and Global Counterinsurgency* consider how anthropologists can, should, and do respond to military overtures, and they articulate anthropological perspectives on global war and power relations. This book investigates the shifting boundaries between military and civil state violence; perceptions and effects of American power around the globe; the history of counterinsurgency doctrine and practice; and debate over culture, knowledge, and conscience in counterinsurgency. These wide-ranging essays shed new light on the fraught world of Pax Americana and on the ethical and political dilemmas faced by anthropologists and military personnel alike when attempting to understand and intervene in our world.
