The spinal cord is part of the central nervous system (CNS), which extends caudally and is protected by the bony structures of the vertebral column. It is covered by the three membranes of the CNS, i.e., the dura mater, arachnoid and the innermost pia mater. In most adult mammals it occupies only the upper two-thirds of the vertebral canal as the growth of the bones composing the vertebral ...

Preface. In our world there is no form of matter more astonishing than the living cell: tiny, fragile, marvelously intricate, continually made afresh, yet preserving in its DNA a record of information dating

back more than three billion years, to a time when our planet had barely cooled from the hot materials of the nascent solar system.

Eduard Pernkopf (November 24, 1888 – April 17, 1955) was an Austrian professor of anatomy who later served as rector of the University of Vienna, his alma mater. He is best known for his seven-volume anatomical atlas, *Topographische Anatomie des Menschen* (translated as *Atlas of Topographical and Applied Human Anatomy*; often colloquially known as the Pernkopf atlas or just Pernkopf), prepared ...
