Atypical Presentations | Geri-EM

The definition of an atypical presentation of illness is: when an older adult presents with a disease state that is missing some of the traditional core features of the illness usually seen in younger patients. Atypical presentations usually include one of 3 features: (a) vague presentation of illness, (b) altered presentation of illness, or (c) nonpresentation of illness (ie, underreporting).

Atypical Presentation of a Common Disease: Shingles of the Larynx Introduction. Varicella-zoster virus (VZV) infection produces two distinct types of clinical manifestations. The first... Case report. An 80-year-old man was referred to the department of otolaryngology - head and neck surgery in a ...

(7) Cytokines have also been attributed to certain neurologic symptoms: a patient presenting with fever, cough and altered mental status eventually developed acute necrotising haemor-

rhagic encephalopathy. (8) Other atypical neurologic presentations include acute cerebrovascular disease and muscle injuries.

Atypical Presentation of a Common Disease: Shingles of the ...

The presentation of coeliac disease (CD) in adults is becoming increasingly atypical. Up to 5% of patients with recurrent mouth ulcers may have underlying CD. Screening for CD should be part of the workup of unexplained elevated liver enzymes, once the common causes are excluded, as up to 10% of these patients may have underlying CD.

Herpes zoster is a neurocutaneous disease resulting from the reactivation of endogenous varicella-zoster virus (VZV) in dorsal sensory or cranial nerve ganglia. Rarely, this infection manifests without the characteristic dermatomal rash, a condition termed zoster sine herpete. Viral spreading of herpes zoster in the head and neck may manifest as various signs and symptoms because of the multiple possible combinations of cranial neuropathies.
