This book constitutes the refereed proceedings of the IFIP TC 5 International Conference on Digital Product and Process Development Systems, NEW PROLAMAT 2013, held in Dresden, Germany, in October 2013. The conference succeeds the International Conference on Programming Languages for Machine Tools, PROLAMAT 2006, held in Shanghai, China in 2006. In order to demonstrate the new orientation toward IT innovations, the acronym PROLAMAT has been changed into NEW PROLAMAT and is now interpreted as Project Research on Leading-Edge Applications and

Methods for Applied Technology. The 42 revised papers were carefully reviewed and selected for inclusion in the volume. They have been organized in the following topical sections: digital product and process development; additive manufacturing; quality management; standardization and knowledge management developments; and simulation of procedures and processes.

More than 120 authors from science and industry have documented this essential resource for students, practitioners, and professionals. Comprehensively covering the development of the internal combustion engine (ICE), the information presented captures expert knowledge and serves as an essential resource that illustrates the latest level of knowledge about engine development. Particular attention is paid toward the most up-to-date theory and practice addressing thermodynamic principles, engine components, fuels, and emissions. Details and data cover classification and characteristics of reciprocating engines, along with fundamentals about diesel and spark ignition internal combustion engines, including insightful perspectives

about the history, components, and complexities of the present-day and future IC engines. Chapter highlights include: • Classification of reciprocating engines • Friction and Lubrication • Power, efficiency, fuel consumption • Sensors, actuators, and electronics • Cooling and emissions • Hybrid drive systems Nearly 1,800 illustrations and more than 1,300 bibliographic references provide added value to this extensive study. "Although a large number of technical books deal with certain aspects of the internal combustion engine, there has been no publication until now that covers all of the major aspects of diesel and SI engines." Dr.-Ing. E. h. Richard van Basshuysen and Professor Dr.-Ing. Fred Schäfer, the editors, "Internal Combustion Engines Handbook: Basics, Components, Systems, and Perspectives"

Das Buch behandelt die neuesten Entwicklungen in Bezug auf Ottomotoren mit Direkteinspritzung und Direkteinblasung von Kraftstoffen und Gasen, beschreibt und bewertet Motorkonzepte, wie z.B. Downsizing und Aufladung und erläutert die Anforderungen an Werkstoffe und Betriebsstoffe. Der Ausblick am Ende des Buches beleuchtet die Frage, ob Ottomotoren in

Zukunft das Kraftstoff-Verbrauchsniveau von Dieselmotoren erreichen können und ob alternative Antriebe Hubkolbenmotoren verdrängen werden. Für die 4. Auflage wurden Kapitel überarbeitet und aktualisiert. Außerdem wurde ein Kapitel zur Direkteinblasung von Erdgas/Methan und Wasserstoff ergänzt. Der Ottomotor mit Direkteinspritzung und Direkteinblasung hat zunehmende Bedeutung erlangt. Dessen Potenzial ist jedoch bei weitem noch nicht ausgeschöpft. Leistungs- und Drehmomenterhöhung gepaart mit weiter reduziertem Kraftstoffverbrauch bei gleichzeitiger Schadstoffreduzierung geben klar die Richtung künftiger Entwicklungen vor. Als Schlüssel für diese Entwicklung können neue Einspritz/Einblas- und Verbrennungsverfahren gelten, die einen Technologieschub bewirken.
