Multimedia computing (MMC) is becoming an increasingly popular technology. The widespread use of personal computers, together with significant scientific and economic breakthroughs in multimedia technology have begun to make multimedia a practical paradigm of end user computing, from the interactive text and graphics model that has developed since the 1950s into one that is more compatible with the digital electronic world of the next century. Although the field of multimedia computing is more than 30 years old, the rapidly changing personal computing industry has become obsessed with a set of technologies, products and practices that falls under the rubric of multimedia computing. As the industry continues to race toward the 21st century, it is becoming more and more difficult for people who are interested, but not directly involved in the development of MMC to identify and understand the important and key issues that underlie this topic. Multimedia Computing: Preparing for the 21st Century addresses the modern environment of MMC by providing you with a contemporary and extensive source book for issues surrounding MMC today and trends and issues related to the next generation of end user computing utilizing the technologies of multimedia.
