Welcome to a new edition of the most successful collection of aeronautical books in America. At the request of readers around the world, we have created this magnificent literary work about everything that a pilot in training must learn about one of the most flown aircraft in the world, the magnificent Boeing 737. With the collaboration of Captain Aldo Tatoli, with more than 30 years of airline experience, we have developed an educational manual based on the models of B737-700, B737-800 and B737-900. An educational guide that will take the reader to know the main components of the aircraft, its systems and the principle of operation of each of them. A work based on the extensive experience of Captain Aldo Tatoli, who has commanded B737 in almost all its versions. An unparalleled contribution to the aeronautical market, where pilots and fans demand more and more information and material to study every day. A work that promises to be the starting point for many more titles about this incredible aircraft. Our special thanks to Captain Aldo Tatoli for his participation, his dedi-

cation to teaching and his enormous passion for aviation.

This is a comprehensive user guide for the PlanePlotter virtual radar software program that receives and decodes live digital position reports from aircraft and plots their positions and movements on air traffic control type charts. PlanePlotter provides a radar-like display of not only local aircraft but aircraft around the world that are transmitting the digital messages in the ACARS, ADS-B and HFDL formats. PlanePlotter plots aircraft positions, altitudes and times decoded from the message traffic that it receives including embedded position reports, AMDAR reports and ADS reports contained in ACARS messages and ADS-B position reports received by a variety of virtual radar boxes including the Kinetic-Avionic's SBS1(tm), AirNav System's RadarBox(tm), the PlaneGadget Radar and the Mode-S Beast virtual radar receivers. The book has some 300 pages and includes 200 illustrations and diagrams. The latest edition covers the functions of Multilateration, Beamfinder and Conditional Expressions.

Aircraft Communications Addressing and Reporting System (ACARS) is a digital datalink system for transmission of short, and relatively simple messages between aircraft and ground stations using the airband VHF radio link. The message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service.

I have created this book for motivated people like me, who worked hard to achieve their goals, never giving up when encountering setbacks. This is a book created for pilots, but also a guide for passengers who love to travel and want to be always informed. We breathe a sigh of relief after a difficult year - 2020. It was a year in which we were all tried to balance numerous factors: mental, social, financial, professional, and family life. I believe that there is a winner in everyone's soul. We invite you to read the book, "Aviation Journey for Smart People". By means of it, we share information about how to prepare for the Aviation Interviews, Human Resources, Group Exercises, Body Language, Pilot Aptitude Test with explanations, and suggestions for solutions. We offer a series of 250 Technical Questions and Answers (Feedback from pilots), Simulator Preparation, Charts Briefing, carefully selected from company manuals, which assessors use in all aviation interviews. In the second part, we invite you to the magical world of the cockpit at 10,000 m to discover together the secrets of aviation.

This book provides code usage for Sabre computer reservation (RES) and flight operations (DECS) partitions. It is only available

TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

This is an illustrated technical guide to the Boeing 737 aircraft. Containing extensive explanatory notes, facts, tips and points of interest on all aspects of this hugely successful airliner and showing its technical evolution from its early design in the 1960s through to the latest advances in the MAX. The book provides detailed descriptions of systems, internal and external components, their locations and functions, together with pilots notes and technical specifications. It is illustrated with over 500 photographs, diagrams and schematics. Chris Brady has written this book after many years developing the highly successful and informative Boeing 737 Technical Site, known throughout the world by pilots, trainers and engineers as the most authoritative open source of information freely available about the 737.
