### **8WL150 - ESTRADA DECKER**

The bus is the most patronised of all land-based public passenger mode but is seen as a somewhat unglamorous means of supporting mobility and accessibility, in contrast to rail – heavy and light, yet offers so much to the travelling public as well as offering attractive sustainability opportunities. This book reflects the author's perspective on issues of importance to the preservation and health of the bus sector. The twenty one chapters cover the themes of institutional reform, performance measurement and monitoring, service quality, costing and pricing of services including commercial and non-commercial contracts, travel choice and demand, integrated bus-based systems, and public transport policy, especially challenges in growing patronage.

"TRB's Commercial Truck and Bus Safety Synthesis Program (CTBSSP) Synthesis 21: Driver Selection Tests and Measurement synthesizes information on the use of tests, measurements, and other assessment methods used by commercial truck and bus companies in the driver selection process. The report also identifies and describes driver selection methods and instruments and their potential usefulness in predicting driver crash risk."--Publisher's description.

Examines the use of small buses -- 30 ft or less in length -- as replacements for large buses in fixed-route, scheduled service or those used in innovative, more flexible operations such as route deviation or demand-response service.

Paratransit services are more expensive to provide on a per-trip basis than fixed-route transit, so operating efficiencies could be achieved by attracting some paratransit riders to fixed route. The Guidebook identifies the characteristics and preferences of four distinct market segments: people with disabilities who use fixed-route transit; people with disabilities who use paratransit; others who currently use paratransit; and people with disabilities who normally do not use transit. The Guidebook also provides step-by-step procedures for estimating demand, locating bus stops, training drivers, providing travel training for patrons, marketing services, and evaluating successes.

In this report the Committee concludes that the Local Transport Act 2008 gives local authorities a range of tools to work with bus operators to improve local bus services and does not need updating. However, the Government and bus industry need to show more leadership to raise the standard of bus services with the introduction of multi-operator smartcards, service stability and passenger information. While some bus services are good, too often passengers are dissatisfied with the reliability of the service, the level of fares and the need to buy another ticket if the trip involves two bus companies. More competition among bus operators may improve services in some areas but many routes simply cannot sustain more than one operator. It is worrying that the Traffic Commissioners who are responsible for bus safety and punctuality monitoring appear to have insufficient resources to carry out these crucial roles as effectively as they would wish. Outside London, the quality of bus services depends on partnerships between local authorities and the bus operators. In a minority of areas, such as where local authorities take on responsibility for local rail services, bus franchising may be an appropriate option. These would require additional subsidy and sustained political commitment

Addresses the roles and responsibilities of bus field supervisors, including emerging concerns about how to improve the relationship between supervisors and bus operators, while placing supervisors in a more positive role; how to obtain a greater return from employee productivity with tightening budgets and declining ridership; and how to improve customer service.

Introduction and Research Approach -- Findings -- Management Profile for Maintaining a Qualified Workforce -- Conclusions and Suggested Research. Offers information on the current practices of transit agencies to reduce injuries to bus occupants during collisions and injuries to passengers while boarding, riding, and leaving the bus.

This second edition of the Handbook of Employee Selection has been revised and updated throughout to reflect current thinking on the state of science and practice in employee selection. In this volume, a diverse group of recognized scholars inside and outside the United States balance theory, research, and practice, often taking a global perspective. Divided into eight parts, chapters cover issues associated with measurement, such as validity and reliability, as well as practical concerns around the development of appropriate selection procedures and implementation of selection programs. Several chapters discuss the measurement of various constructs commonly used as predictors, and other chapters confront criterion measures that are used in test validation. Additional sections include chapters that focus on ethical and legal concerns and testing for certain types of jobs (e.g., blue collar jobs). The second edition features a new section on technology and employee selection. The Handbook of Employee Selection, Second Edition provides an indispensable reference for scholars, researchers, graduate students, and professionals in industrial and organizational psychology, human resource management, and related fields.

Presents state of the practice information about the various actions transit agencies (and other employers) have taken to help ensure the availability of quality employees in an increasingly competitive employment environment. It focuses on the practices and policies transit agencies have put in place to help minimize absenteeism at their agencies, from which other agencies may find useful applications.

The 30th edition of this annual publication contains a wide range of transport statistics which gives a comprehensive picture of transport use in Britain. It includes data tables relating to: general and cross modal transport; aviation; energy and the environment; freight; maritime transport; public transport, including rail, tube, bus and coaches; roads network and traffic; transport accidents and casualties; motor vehicles and goods vehicles; and international comparisons.

"TRB's Transit Cooperative Research Program (TCRP) Synthesis 63: On-Board and Intercept Transit Survey Techniques examines transit agencies' experiences with planning and implementing on-board and intercept surveys. On-board and intercept surveys include self-administered surveys distributed on board buses and railcars, and in stations, as well as interviews conducted in these environments. The report provides an overview of industry practices and covers a broad range of issues addressed in planning a given survey"--Publisher's description

Public Transport provides an accessible introductory text to the field of public transport systems, covering bus, coach, rail, metro, domestic air and taxi modes. The market structure is set out, together with data collection methods. The technology of bus and rail systems is introduced with particular reference to peak capacity and energy consumption. An analysis of cost structures and costing methods leads into a review of pricing concepts and their application. In addition to issues related to urban systems, specific chapters cover rural public transport and the long-distance sector. A concluding chapter examines long-run policy issues, such as likely population changes and scope for substitution of travel. The primary context taken is that of the British Isles, drawing extensively on data such as the National Travel Survey in England. However, the principles and findings are also broadly applicable to countries of similar per capita income and population density. This sixth edition introduces a new chapter on data collection and survey methods for public transport systems in addition to a general update of the text to reflect the latest statistical evidence, research findings and policy changes. Public Transport is an essential textbook for both students in transport and those in related fields. This is an invaluable resource for transport planners in local authorities and consultancies.

This report provides guidance to transit agency managers on whether to purchase a driving simulator and, if so, what kind. Also, this document provides guidance on how to use simulation effectively to improve bus operator training and safety. Information was obtained from a literature search, surveys, and site visits.

First Published in 1991. Routledge is an imprint of Taylor & Francis, an informa company.

This report presents a directory of effective practices used to prevent bus accidents at small, medium, and large transit systems. Most of the information was obtained from 182 transit systems in the United States and in Canada and from statewide transit insurance pools in six states. The directory is designed to be used by transit management, operations, and safety personnel.

"TRB's Transit Cooperative Research Program (TCRP) Synthesis 93: Practices to Protect Bus Operators from Passenger Assault highlights practices and policies implemented by transit agencies to deter and mitigate assaults on bus operators"--Publisher's description.
