INFORMED CONSENT - BRACHIOPLASTY

Bilateral Brachioplasty refers to an operation to reduce the size of skin and soft tissues of the upper arms. Bilateral typically means Right and Left side of the body (in this case R. and L. arms) and not scar on both side of the same arm.

Cons. You will have visible scars along the insides of your arms,

extending from the armpit to the elbow. If your sagging underarm skin is not excessive, an upper arm lift may not be worth the resulting scars (in this case, consider limited-incision brachioplasty or liposuction).
