Dark Truth Behind Bitcoin Boom Should Be Worrying Us All ... Bitcoin, it's the cryptocurrency that's all over the place like those spinny hand things were last year, but unlike those you don ...

Blockchain promises to solve this problem. The technology at the heart of bitcoin and other virtual currencies, blockchain is an open, distributed ledger that can record transactions between two parties efficiently and in a verifiable and permanent way. The ledger itself can also be programmed to trigger transactions auto-matically.

A bitcoin is not an investment, just as gold, tulip bulbs, Beanie Babies, and rare baseball cards are also not investments. Blockchain is a computer protocol that allows two people (or machines) to do transactions (sometimes anonymously) even if they don't trust each other or the network between them.

scalability - How will Bitcoin and the Blockchain scale in ...

Bitcoin transactions are seen by the entire network within a few seconds and are usually recorded into Bitcoin's worldwide ledger called the blockchain, in the next block. While it's possible that a transaction won't be confirmed in the next block, in the vast majority of circumstances it is fine to accept a transaction as soon as it has been seen by the network.

Many people have been asking me if Bitcoin is acceptable in Kenya over the past months. Let's start with knowing what is bitcoin exactly. Bitcoin is a new digital currency that was created in 2009 by an unknown person using the alias Satoshi Nakamoto. There are no transaction fees and no need...

Bitcoins are an ideal first use of the blockchain. They may even turn out to be the best of all the good use cases to come. They are a B2C use, not a B2B use, as all great digital innovations have been. Digital B2C disruption usually comes first, as the major value unlock, then B2B follows.
