Answers provided to every question are well explained with proper details, facts and figures. With this highly useful book, keep record of your progress and boost confidence to clear upcoming Tier-I 2022. TOC Solved Papers (1-50)

Statistical Questions in Evidence-based Medicine is a companion volume to the new edition of An Introduction to Medical Statistics and includes questions and answers which are complementary to the textbook. This new book takes a practical approach that develops an understanding of statistics and suggests appropriate questions to ask about research methods, figures and conclusions and whether they are evidence based. The book is a model of clarity and common sense in what is frequently an unnecessarily obscure area of science. It looks at the application of and provides a critique of statistics, encouraging an evidence-based approach to medical statistics. Through the critical evaluation of the published medical literature, the text will enable both students and re-

searchers to understand the appropriate use of descriptive and inferential statistics in study design and when writing papers. The reproduction of short excerpts of material from published papers or summaries of their results are included and they are considered in a question and answer format. The reader can either read through the series of cases and follow through worked examples or work through the book themselves as a series of exercises. The questions are clearly graded, through the use of icons, in terms of difficulty into standard and postgraduate levels. This book will prove invaluable to students, medical researchers and doctors alike.

This book contains a print-out of papers freely available from [www.bland.in](http://www.bland.in) The workbook is written in the style of the Edexcel GCSE 9-1 1MA1 question types. The books in this series contain topics that are related and so make study much easier. They fit easily into a school bag and so save having to carry the heavy full book around. The exam is now harder and some of the topics are new to GCSE Maths. However you can get help by buying the Model Answers which show all the working and full explanations from: [www.bland.in](http://www.bland.in)

These are two short stories from the collection THE GREAT PORTRAIT MYSTERY: "PERCIVAL BLAND'S PROXY" and "THE MISSING MORTGAGEE", wherein the brilliant medical investigator, Dr. Thorndyke, solves murderous crimes. Percival Bland was an uncommon criminal. He knew that his continual passing of counterfeit banknotes would eventually catch up with him, so he had a plan--precautions against the inevitable catastrophe. We can understand why he has created an alternate persona, Robert Lindsay, using disguises and renting two places of residence. No one seems to notice that he and his "cousin" Robert never are at their respective homes simultaneously, nor are they at home when the other visits, nor does anyone see the resemblance of their facial

appearance under the makeup. But why does he buy human bones at auction? The lot was described in the catalog as "a complete set of human osteology" but they were not an ordinary "student's set," for the bones of the hands and feet, instead of being strung together on cat-gut, were united by their original ligaments and were "of an unsavoury brown colour." What does he want with those moldy bones? He has a nefarious plan, but it does not fool Dr. Thorndyke. After Dr. Thorndyke solved the case of Percival Bland, the doctor was called in by a life insurance company to investigate another case. There was apparently no doubt that Thomas Elton, a friendless, poverty-stricken artist, had fallen from the top of the overhanging cliff onto the beach. Now, one would suppose with the evidence of this fall of about a hundred and fifty feet, the smashed face and broken neck, there was not much room for doubt as to the cause of death. But Thorndyke indeed has his doubts. Richard Austin Freeman (11 April 1862 - 28 September 1943) was a British writer of detective stories, mostly featuring the medico-legal forensic investigator Dr. Thorndyke. He claimed to have invented the inverted detective story (a crime fiction in which the commission of the crime is described at the beginning, usually including the identity of the perpetrator, with the story then describing the detective's attempt to solve the mys-

tery). Freeman used some of his early experiences as a colonial surgeon in his novels. Many of the Dr. Thorndyke stories involve genuine, but often quite arcane, points of scientific knowledge, from areas such as tropical medicine, metallurgy and toxicology. This workbook is written in the style of the Edexcel GCSE Grades 9-1 1MA1 question types. They are arranged by topic so study and revision are made much easier. Model answers showing working with explanations are available for purchase at [www.bland.in](http://www.bland.in)
