A rivet nut, also known as a blind nut or nut-sert, is a one-piece internally threaded and counterbored tubular rivet that can be anchored entirely from one side. There are two types: one is designed to form a bulge on the back side of the panel as a screw is

tightened in its threads.

A high clamp load can be created simply by turning the nut and bolt. Since rivets have no threads, they can create a very limited clamp load.

A machine screw is a screw or bolt with a flat point. Available in a variety of drive types and heads, they fit a wide variety of applications. Often driven into tapped holes. Used with nuts and washers, also known as "stove bolts" or "stovers".

Rivets that come in a variety of colors.

Closed end. Closed end rivets have a sealed end that creates a water tight fit when installed. Multi-grip. Multi-grip rivets are designed to accommodate a wide range of material thicknesses. Interlock. Interlock rivets provide significantly more strength than standard blind rivets.
