Once wear and grooves are created in the pump housing, fuel leaks from either side, balancing pressure, and the piston ceases movement. Once this starts to happen, the pump loses timing advance, the engine loses power, and you consume more and more fuel. The repair for this condition is replacement of the pump housing and internal parts.

We should note here that all rotary pumps have this potential problem, to varying degrees, so this is nothing new to the injection pump world. What actually happens when the rotor seizes, and this is from a Bosch Factory Rep, the slot in the rotor interferes with the distributor because of an inferior deburring process.
