FO20AT - HEIDI JAXSON

The Business Continuity Plan includes details of all the procedures that need to be implemented to ensure that the business operations are running smoothly during an ongoing emergency situation. It can include inventory, data backups, backup site locations and any necessary emergency equipment.

Business continuity planning is based on a realistic risk assessment of events that could happen, and the impact those events could have if they did happen. An organisation can then ensure appropriate plans are in place to cope with most given situations.

What does GDPR mean for Business Continuity Planning (BCP ...

What Is Business Continuity and Why Is It Important?

Business continuity planning is not just about ensuring that your data backups are in place though that is part of the process. It involves maintaining or quickly resuming operations in every phase of the business. Ideally, a business should be able to avoid downtime while dealing with the disaster.

A business continuity plan (BCP) is a document that outlines how a business will continue operating during an unplanned disruption in service. It's more comprehensive than a disaster recovery plan and contains contingencies for business processes, assets, human resources and business partners - every aspect of the business that might be affected. Plans typically contain a checklist that includes supplies and equipment, data backups and backup site locations.

Business continuity planning is a strategy. It ensures continuity of operations with minimal service outage or downtime. A business disaster recovery plan can restore data and critical applications in the event your systems are destroyed when disaster strikes. Balancing two planning strategies is a matter of priorities.

Using Data and Analytics for Business Continuity Planning

Regardless of the size of your business, regular data backups and recovery are important so you can formulate an effective IT

business continuity plan (BCP) that minimizes downtime. Your organization cannot afford to overlook data backup, data recovery, and systems recovery in its business continuity and disaster recovery plan.

Data security plans should be added to your existing Business Continuity Plan. This document only covers electronic data as we presume that your existing Business Continuity Plan will cover risks to paper-based records; e.g. fire, flood, loss of records etc. The Care Provider Alliance has produced guidance on contingency planning. 1.
