This Handbook presents in-depth research conducted on a myriad of issues within the field of financial literacy. Split into six sections, it starts by presenting prevalent conceptions of financial literacy before covering financial literacy in the policy context, the state and development of financial literacy within different countries, issues of assessment and evaluation of financial literacy, approaches to teaching financial literacy, and teacher training and teacher education in financial literacy. In doing so, it provides precise definitions of the construct of financial literacy and elaborates on the state and recent developments of financial literacy around the world, to show ways of measuring and fostering financial literacy and to give hints towards necessary and successful teacher trainings. The book also embraces the diversity in the field by revealing contrasting and conflicting views that cannot be bridged, while at the same time making a contribution by re-joining existing materials in one volume which can be used in academic discourse, in research-workshops, in university lectures and in the definition of program initiatives within the wider field of financial literacy. It allows for a landscape of financial literacy to be depicted which would foster the implementation of learning opportunities for human beings for sake of well-being within financial living-conditions. Over the past 20 years the global political economy has experienced its most profound shifts since the onset of the industrial revolution. In South Africa and the World, Mills Soko reflects on some of the salient issues that have pervaded public discourse during this time, analysing them within the context of the contemporary South African political economy and of the country's position in the world. Arranged thematically, the essays were all written during a defining period in recent history, a period that has witnessed, among others, the accession of China to the WTO, the 9/11 terrorist attacks on the US, the invention of the iPad, the birth of Facebook, the 2008/9 global financial crisis, Brexit and the global coronavirus pandemic which began at the end of 2019. The turbulent multipolar world demands visionary political and economic leadership, supported by institutions well attuned to contemporary conditions. Such leadership is in short supply. Nor is the existing institutional architecture sufficiently equipped to deal with a complex array of economic, social, environmental, technological and demographic challenges. Mills Soko highlights what has not worked in terms of politics, leadership, foreign policy, the economy, the African development trajectory, corporate ethics, international trade, global governance, and the thread which underlies all these issues - the importance of strong, decisive and accountable leadership. He counters his criticism with what has worked and offers views on how some of the problems that have constrained progress in South Africa and the world can be solved. A central message emerges from his writings: leadership and governance matter, whether in the national or international context. It is a message that permeates all the chapters in the book. And it goes to the heart of what South Africa has gone through over the past two decades and where it is today.

Education has gone through numerous radical changes as the digital era has transformed the way we as humans communicate, inform ourselves, purchase goods, and perform other mundane chores at home and at work. New and emerging pedagogies have enabled rapid advancements, perhaps too rapidly. It's a challenge for instructors and researchers alike to remain up to date with educational developments and unlock the full potential that technolo-

gy could have on this significant profession. The Handbook of Research on Digital Learning is an essential reference source that explores the different challenges and opportunities that the new and transformative pedagogies have enabled. The challenges will be portrayed through a number of case studies where learners have struggled, managed, and adapted digital technologies in their

effort to progress educational goals. Opportunities are revealed and displayed in the form of new methodologies, institutions scenarios, and ongoing research that seeks to optimize the use of such a medium to assist the digital learner in the future of networked education. Featuring research on topics such as mobile learning, self-directed learning, and cultural considerations, this

book is ideally designed for teachers, principals, higher education faculty, deans, curriculum developers, instructional designers, educational software developers, IT specialists, students, researchers, and academicians.
