IQRKGC - AYERS BLAINE

This is the seventh edition of Tax Policy Reforms: OECD and Selected Partner Economies, an annual publication that provides comparative information on tax reforms across countries and tracks tax policy developments over time. The report covers the tax policy reforms introduced or announced in 71 member jurisdictions of the OECD/G20 Inclusive Framework on Base Erosion and Profit Shifting, including all OECD countries, for the 2021 calendar year. In addition to providing an overview of tax policy reforms, and the macroeconomic and tax revenue context in which measures were introduced, the report also

contains a Special Feature that examines government responses to rising energy prices and offers some policy recommendations in the event that prices remain high.

Comparing Fiscal Federalism investigates intergovernmental financial relations and the current allocation of financial and fiscal powers in compound states from a comparative and interdisciplinary perspective. Theoretical approaches and case studies provide a comprehensive analysis of recent developments and emerging trends.

This highly original book analyzes political decentralization and fiscal federalism in Canada and Germany, both traditional federal countries, and in Spain, a unitarian country

engaged in the last two decades in a process of decentralization. The three key issues required for a well designed financing system are analyzed in depth herein, namely: tax assignment, equalization grants (i.e. redistribution of money from the wealthy regions or the national government to poorer regions) and the role of regional government in the administration of taxes. Fiscal Federalism and Political Decentralization will be of particular interest to academics and researchers of economics, public economics, public finance and public choice. It will also appeal to politicians and policy makers as well as organizations and agencies related to the economy and fiscal federalism.

"From adjusted gross income to zoning and property taxes, the second edition of *The Encyclopedia of Taxation and Tax Policy* offers the best and most complete guide to taxes and tax-related issues. More than 150 tax practitioners and administrators, policymakers, and academics have contributed. The result is a unique and authoritative reference that examines virtually all tax instruments used by governments (individual income, corporate income, sales and value-added, property, estate and gift, franchise, poll, and many variants of these taxes), as well as characteristics of a good tax system, budgetary issues, and many current federal, state, local, and international tax policy issues. The new edition has been completely revised, with 40 new topics and 200 articles reflecting six years of legislative changes. Each essay provides the generalist with a quick and reliable introduction to many topics but also gives tax specialists the benefit of other experts' best thinking, in a manner that makes the complex understandable. Reference lists point the reader to additional sources of information for each topic. The first edi-

tion of *The Encyclopedia of Taxation and Tax Policy* was selected as an Outstanding Academic Book of the Year (1999) by *Choice* magazine."--Publisher's website.

The fifth ABCD-LAC focuses on decentralisation and the need to bring governments closer to the people in a rapidly changing global economic environment.

Local Tax Policy: A Primer provides the definitive discussion of how local governments raise revenue. The book addresses the fundamental influences on local tax and revenue policy including interjurisdictional competition, the politics of anti-taxation, and the relationships with state and federal governments.

Canada's centennial anniversary in 1967 coincided with a period of transformative public policymaking. This period saw the establishment of the modern welfare state, as well as significant growth in the area of cultural diversity, including multiculturalism and bilingualism. Meanwhile, the rising commitment to the protection of individual and collective rights was captured in the project of a "just society." Tracing the past, present, and future of Ca-

nadian policymaking, *Policy Transformation in Canada* examines the country's current and most critical challenges: the renewal of the federation, managing diversity, Canada's relations with Indigenous peoples, the environment, intergenerational equity, global economic integration, and Canada's role in the world. Scrutinizing various public policy issues through the prism of Canada's sesquicentennial, the contributors consider the transformation of policy and present an accessible portrait of how the Canadian view of policymaking has been reshaped, and where it may be heading in the next fifty years.

This book draws on experi-

ences in developing countries to bridge the gap between the conventional textbook treatment of fiscal decentralization and the actual practice of sub-national government finance. The extensive literature about the theory and practice is surveyed and longstanding problems and new questions are addressed. It focuses on the key choices that must be made in decentralizing, on how economic and political factors shape the choices that countries make, and on how, by paying more attention to the need for a more comprehensive approach and the critical connections between different components of decentralization reform, everyone involved might get more for their money. This book provides a comprehensive survey of the distribution of the taxing authority among different levels of governments of a selection of countries. The survey is not restricted to the traditional federal countries, such as the United States and Switzerland, but also includes traditional unitary states (or forms of government), such as France and the United Kingdom. The detailed approach demonstrates the current historical trend towards a pro-

gressive increase in the local governments' (taxing) authority. In this way, the reaction to the crisis of the (tax) state, and the search for the highest level of public efficiency, pass through the devolution of the taxing powers. This book aims to explain not only how the Constitution (or the Supreme Law) allocates taxing powers but, in particular, how these systems works in practice. Each country chapter discusses the constitutional structure of the state (or of the government) and looks at how it has been implemented as well as at the effects of this design on the form of the state (or government) and the tax system. The book begins with a methodological analysis for the comparison of different constitutional tax systems. This is followed by a description of the "fiscal federalism" systems of selected countries, beginning, for historical reasons, with the United States and concluding with a developing system, the People's Republic of China. The remaining country chapters are grouped according to either historical or geographical criteria. Also included is a chapter devoted to the European Union, a federal systems in arms, in order to highlight its pe-

cularities and define the limits for the Member States' sovereignty.

Edited by Parthasarathi Shome, this Handbook was written primarily for economists who are responsible for analyzing and evaluating economic policies of developing countries at an applied level, and who would benefit from a comprehensive discussion of the concepts, principles, and prevailing issues of taxation.

In today's era of International business, International Human Resource Management (IHRM) is emerging as a crucial factor since organizations are run by people. What is interesting in this phenomenon is, not only that there are differences in people across the countries, but even within a country or regions within it. This complex socio-cultural and psychological fabric coupled with historical, geographic, economic and political factors, creates certain boundary conditions and makes IHRM a very complex process. The intention of this book is to portray the various factors that are connected with managing Human Resources in International Business. Since the two are inseparable, any organization aspiring to participate as a player in international business must develop the knowledge, skills and acumen to perceive the subtle nuances that govern the rules of game. IHRM as a discipline cuts across all other business operations in the international context and plays a vital role in the success or failure of a business venture since, businesses are essentially driv-

en by people. In the light of the above, this book has sought to address some of the issues that relate to IHRM, which need to be logically understood by any keen observer of international business, today. The approach of this book has been to detail IHRM both, in terms of a function, as well as a process and the factors or key elements that are attached to them. To make this book reader-friendly, chapter highlights have been added at the beginning of each chapter to facilitate the reader to identify the broader areas that may be learnt from a particular chapter. Each chapter also contains detailed references and key terms. Conceptual questions, multiple choices, web-based exercises are some of the additional features of the book. Relevant diagrammatic representation, relevant case study and list of web references have been also added in this book.

The format of the budget document can facilitate this debate. This book provides a comprehensive treatment of all aspects of local budgeting needed to develop sound fiscal administration at the local level. Topics covered include fiscal administration, forecasting, fiscal discipline, fiscal transparency, integrity of revenue administration, budget formats, and processes including performance budgeting, and capital budgeting.

How to Establish a Tax Policy Unit

The assignment of revenues in most developing and transitional countries to the central government has arguably facilitated irresponsible behavior by some subnational governments. One way to relieve this problem is to strengthen subnational tax regimes. The paper proposes two approaches to accomplish such strengthening in developing countries. The first—most applicable to large countries with important

regional governments—is to establish subnational value-added taxes (VATs); the second is to replace the various unsatisfactory state and local taxes imposed on business by a low-rate value-added tax levied on the basis of income (production, origin) rather than consumption (destination).

This book explains the theoretical and policy issues associated with the taxation of financial services and includes a jurisdictional overview that illustrates alternative policy choices and the legal consequences of those choices. The book addresses the question: how can financial services in an increas-

ingly globalized market best be taxed through VAT while avoiding economic distortions? It supports the discussion of the key practical problems that have arisen from the particular complexity of the application of VAT to financial services, and allows for the evaluation of best practice by comparing the major current reform models now being implemented.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, in-

terpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
