It includes simple step-by-step procedures of a prospective (i.e. future-oriented) financial statement simulation and closes with a comprehensive real-life case study that demonstrates a practical application of the analytical tools discussed earlier in the text. Additionally, the textbook includes online appendices consisting of additional comprehensive real-life case studies (of varying degrees of complexity and dealing with different aspects of a practical financial statement analysis), a set of MS Excel files that contain all major calculations included in tables and charts that appear in the core textbook, and a set of webinars in which the most fundamental parts of the core textbook are discussed in the form of the recorded lectures.

Seminar paper from the year 2004 in the subject Business economics - Accounting and Taxes, grade: 1.7, University of Bayreuth (School of Law, Economics and Business Administration ), course: 'business taxation and auditing', 35 entries in the bibliography, language: English, abstract: Huge changes arose in the world of

economy during the last decade. Due to globalisation and competition for scarce capital a heightened discussion regarding different national accounting policies emerged. There has been an intensive controversy between continental-European and Anglo-American based accountancy. All companies listed on a stock exchange in the EU are obliged to present their group accounts in accordance with IAS/IFRS2 from 2005 on. One crucial aspect of IRFS focuses on the increasing tendency to recognise a fair value which implies a departure from historical cost-based financial statement to a rather market value-based one. Subsequently, this paper introduces and compares the current valuation bases of the German commercial/tax law and IRFS. Because of the increasing importance of IFRS the major point reflects this consideration. Finally, contrasts will be emphasised and opportunities for a complete takeover of an advanced fair value accounting to German accountancy will be examined. For this reason a reference to the general objectives and principles both of the accountancies is inevitable and will be introduced in either case.

The updated, real-world guide to interpreting and unpacking GAAP and non-GAAP financial statements In *Financial Statement Analysis, 5th Edition*, leading investment authority Martin Fridson returns with Fernando Alvarez to provide the analytical framework you need to scrutinize financial statements, whether you're evaluating a company's stock price or determining valuations for a merger or acquisition. Rather than taking financial statements at face value, you'll learn practical and straightforward analytical techniques for uncovering the reality behind the numbers. This fully revised and up-to-date 5th Edition offers fresh information that will help you to evaluate financial statements in today's volatile markets and uncertain economy. The declining connection between GAAP earnings and stock prices has introduced a need to discriminate between instructive and misleading non-GAAP alternatives. This book integrates the alternatives and provides guidance on understanding the extent to which non-GAAP reports, particularly from US companies, may be biased. Understanding financial statements is an essential skill for business professionals and investors. Most books on the subject proceed from the questionable premise that companies' objective is to present a true picture of their financial condition. A safer assumption is that they seek to minimize the cost of raising capital by portraying themselves in the most favorable light

possible. *Financial Statement Analysis* teaches readers the tricks that companies use to mislead, so readers can more clearly interpret statements. Learn how to read and understand financial statements prepared according to GAAP and non-GAAP standards Compare CFROI, EVA, Valens, and other non-GAAP methodologies to determine how accurate companies' reports are Improve your business decision making, stock valuations, or merger and acquisition strategy Develop the essential skill of quickly and accurately gathering and assessing information from financial statements of all types Professional analysts, investors, and students will gain valuable knowledge from this updated edition of the popular guide. Filled with real-life examples and expert advice, *Financial Statement Analysis, 5th Edition*, will help you interpret and unpack financial statements.

Mergers and acquisitions (M&As) reshape the corporate landscape helping companies expand market share and gain a strategic advantage. The ability to understand and analyze these transactions is a crucial skill. The first step in acquiring that skill is being able to gather and analyze information on M&As from public sources, such as financial statements. This textbook helps its readers better analyze M&A transactions using information provided in financial statements. Covering accounting and reporting of consolidations, goodwill, non-controlling interests, step acquisitions, spin-offs, equity carve-outs, joint ventures, leveraged buyouts, disposal of subsidiaries, special purpose entities, and taxes, it focuses on the link between underlying economic events and the information in financial statements and how this link affects the assessment of corporate performance. The first part of the book provides description of the accounting rules governing M&A transactions, while the second part includes cases of M&A transactions. Each case focuses on a different element of an M&A transaction, and it is followed by a detailed solution with a complete analysis. Unlike other books in this field, this textbook focuses exclusively on accounting and financial analysis for graduate and upper undergraduate level courses in financial analysis, corporate finance, and financial accounting.

'A veritable triumph for the authors. The book is very suitable for use in both university and professional level accountancy courses' - The British Accounting Review This book provides case material which can be used to investigate the pragmatic and political, as well as the technical, dimensions to financial reporting. The authors present a variety of real-life British case studies in financial reporting, for use in teaching financial accounting techniques, accounting policy and interpretation of financial statements. The case studies illustrate a wide variety of important issues in contemporary financial reporting. Most cover a specific problem area, such as goodwill or accounting for brands, but they also provide an opportunity to investigate the strengths and weaknesses of the accounting process itself. All the cases use real and identified companies and real accounts. In addition, the introductory chapter shows how to set about developing an answer to case-study questions. The authors suggest a variety of questions for each case, and teachers are encouraged to develop alternative questions appropriate to their individual courses. The solutions notes for each case are available in a disk for instructors who recommend the book for course use.
