Young scientists will be thrilled to explore the invisible world of atoms, molecules and elements. Our resource makes the periodic table easier to understand. Begin by answering, what are atoms? See how the atomic model is made up of electrons, protons and neutrons. Find out what a molecule is, and how they differ from elements. Then, move on to compounds. Find the elements that make up different compounds. Get comfortable with the periodic table by recognizing each element as part of a group. Examine how patterns in the period table dictate how those elements react with others. Finally, explore the three important kinds of elements: metals, nonmetals and inert gases. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

Forces are at work all around us. Our resource makes this invisible world easy to "see" and understand. Start by identifying what a force is before looking at different kinds of forces. Conduct several experiments on the force of friction and air resistance. Learn about net force and how more than one force acts on an object. Understand that acceleration and deceleration are examples of unbalanced forces. Explore how the force and mass of an arrow will affect its motion during flight. Explain how the force of gravity affects the weight of an object. Finally, take a look at magnetic and electrostatic forces as examples of forces that act without touching. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, compre-

hension quiz and answer key are also included.

Students will learn about balanced and unbalanced forces, weight and gravity, and magnetic and electrostatic forces, and much more. Written for remedial students in grades 5 to eight. Reading passages, activities for before and after reading, and color mini posters make both teaching and learning a breeze. Crossword, Word Search, comprehension quiz, and test prep included. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy and STEM initiatives.

Heating, Ventilation, Air Conditioning (HVAC) equipment is only as good as the installation. Studies show that the majority of HVACR equipment is not installed to manufacturer specifications, costing the consumer more money. \* 68% of all air conditioning systems are improperly charged. \* 70% of all systems have improper airflow. \* 91% of systems remain untested for combustion safety and effi-

ciency! The System Performance training manual is broken into four sections. Each section covers the techniques and procedures required for a technician to maximize the energy efficiency of HVAC systems. 1. Airflow: Covers the properties of air, airflow measuring tools, CFM calculations/requirements, blower performance, and sensible heat ratios. 2. Critical Charging: Reviews the three charging methods by weight, system superheat, and condenser subcooling. It gives examples of calculating the total charge based on line sizes and provides an easy method to check whether a system is operating to rated capacity. 3. Psychrometrics: Covers the parts of a psychrometric chart and calculating the thermodynamic properties of air. Also, this section demonstrates using wet and dry bulb temperatures to plot air conditions being heated or cooled which enables the technician to obtain a systems effect on sensible and latent building load. 4. Combustion Analysis: This section reviews the basic combustion process and the factors that affect heating efficiency. Proper methods for furnace setting of airflow, adjustment and testing fuel pressure, and flue gas venting.
