Each dermatologist that was board certified after 1992 is required by the American Board of Dermatology to take a recertification exam every ten years. One of the major components of the exam is to be able to identify clinical photographs of approximately 200 skin diseases, and while there are other components to the test, they vary according to subspecialty. However, everyone is

required to identify the images, so several months before the exam, the American Board of Dermatology releases a list of the skin diseases that will be tested, but does not provide the images or reveal which ones will appear. Review of Clinical Conditions for the Dermatology Recertification Examination provides a thorough, concise review of clinical images of the specific conditions that the reader will be required to recognize during the American Board of Dermatology recertification test. In addition, concise key clinical features for each image will be provided that will assist the reader in recognizing the clinical images on the examination, enabling them a more efficient way to study for the test without having to look up images online or in a large text book. Written by a board certified dermatologic surgeon who recently took the recertification exam, this book proves indispensable to dermatologists taking the exam or residents who want a quick reference of the clinical appearances of the main conditions generally encountered by a dermatologist.

This book provides accessible and practical advice on medical dermatology that meets the needs of healthcare professionals working in hospitals. It will also be of value to those working in the community, and to medical students.

Books on dermatology are either focused for medical students or for students of dermatology. A general practitioner sees a lot of skin patients; about 17% of their patients are related to skin disease. We therefore decided to write a book that should meet the needs of a general practitioner. To make the book helpful for the primary care physician, we have focused more on common skin

problems and have discussed the diagnosis and treatment of these disorders in depth to help the general practitioner in diagnosing and treating them. The chapter on the management of skin diseases also gives the details of topical, systemic, and the physical modalities used in treating skin disease. Uncommon skin diseases are only mentioned where required. The chapter on cutaneous manifestations of systemic diseases will help the general practitioner to correlate the cutaneous signs of the common medical problems seen by them. Emphasis is laid on the bacterial, fungal, and parasitic disorders that are prevalent in tropical countries. We have included the common diseases of other continents, as the general practitioner especially of developed countries has patients from all over the world. Congenital and hereditary disorders are discussed with the corresponding chapters, which makes it easier for the reader to remember. A number of practical points are included with each subject, and history of dermatology is included where appropriate to make the subject interesting to read.
