XOCLOV - HOLLAND WERNER

When young Iqbal is sold into slavery at a carpet factory, his arrival changes everything for the other overworked and abused children there. It is Iqbal who explains to them that despite their master's promises, he plans on keeping them as his slaves indefinitely. But it is also Iqbal who inspires the other children to look to a future free from toil...and is brave enough to show them how to get there. This moving fictionalized account of the real Iqbal Masih is told through the voice of Fatima, a young Pakistani girl whose life is changed by Iqbal's courage.

The subject of Computational Contact Mechanics has many facets. Its main impact lies in the transfer of knowledge from theoretical research to applied sciences, and from there to industry. The appli-

cation fields are literally countless, ranging from classical engineering to biomechanics and nano-sciences. The remarkable increase of computer power in recent years has been instrumental in enabling the development of simulation-based analysis in current design activity. This still involves tremendous effort in research, which focuses on, for example, multi-field and multi-scale problems, algorithmic robustness, and geometrical accuracy. Moreover, several aspects of Contact Mechanics, Debonding and Fracture Mechanics, have been combined to offer new enhanced possibilities to the computer simulation of complex phenomena. With these contributions of prominent scientists, this book offers a wide overview on the ongoing research at the highest level in the field.

Challenge and inspire your teenage learners to think beyond language. Think is a fresh, vibrant and upbeat course designed to engage teenage learners and make them think. As well as building students' language skills, it offers a holistic approach to learning: developing their thinking skills, encouraging them to reflect on values and building their self-confidence. Topics are chosen to appeal to and challenge teenagers, firing their imagination and ensuring effective learning. Exam-style exercises and tips help students prepare for Cambridge English Key, Preliminary and First. Informed by the Cambridge English Corpus, the course reflects real language usage and 'Get it right' sections help students avoid common mistakes.

"Jane McLelland was only 30 when she was diagnosed with cancer. A few years later it was stage 4 (or terminal) and had spread to her lungs. Expected to live 12 weeks, she refused to believe there weren't any effective drugs or therapies. Her scientific training meant she was able to examine and digest hundreds of research papers she found in libraries, journals and online - and the conclusion she reached astonished her ... This is the story of how she took on her illness, changed her diet, educated herself, persuaded her oncologist and other doctors to prescribe her an unusual cocktail of commonly used drugs - some of which are already in many people's medicine cabinets - these made the difference between life and death ..."--Publisher description.

On the island of Arcosi, dragons and their riders used to rule the skies. But now they are only legends, found in bedtime stories, on beautiful murals and ancient jewellery. Then servant girl Milla witnesses a murder and finds herself caring for the last four dragon eggs. Forced to keep them secret amidst the growing tensions in the city, she begins to fear that the island's ruler, Duke Olvar, isn't all that he seems. But how can Milla and her friends keep the eggs safe when it means endangering everything she's ever loved? Fiery friendships, forgotten family and the struggle for power collide as Milla's fight to save the dragons leads her to discover her own hidden past.

La ricerca sulla possibile esistenza di civiltà intelligenti oltre a quella del nostro pianeta, è solo ai primordi. In oltre 30 anni di monitoraggio del cielo il Progetto SETI non ha ancora prodotto risultati di rilievo, mentre a livello popolare continua a imperversare la leggenda metropolitana degli UFO. Ma la Scienza come si pone di fronte a quella che forse è l'ultima delle domande: "Siamo soli nell'Universo?" Massimo Teodorani, astrofisico di formazione e ricercatore, sulla scorta delle possibilità attuali dell'astronomia e della fisica, illustra in maniera molto aggiornata le possibili strategie di azione utilizzate al fine di tentare di fornire una risposta alla domanda. Dopo aver fornito in maniera rigorosa tutto quanto sta alla base di questa ricerca partendo dalla caccia ai pianeti extrasolari, di attualissima importanza soprattutto dopo le formidabili scoperte del telescopio spaziale Kepler, l'autore traccia un quadro completo e preciso di quanto è possibile fare oggi per tentare di scovare le intelligenze che potrebbero albergare su altri mondi. A tale scopo vengono illustrate le tecniche e le strategie sia fisiche che astronomiche più importanti che potrebbero permettere di rispondere ai nostri quesiti, partendo da una descrizione accurata delle nuove prospettive del Progetto SETI per arrivare alla possibilità, scientificamente dimostrabile, che il Sistema Solare stesso possa essere visitato. Per quanto ricco in alcuni punti di ipotesi avveniristiche e affascinanti, il libro è in larga parte strutturato come un testo di astronomia, volendo l'autore stesso mostrare al lettore sia la metodologia seguita da lui e dai suoi colleghi nel corso di queste investigazioni che l'importanza ineliminabile di perseguire un atteggiamento di ponderata apertura mentale, requisito imprescindibile per qualunque tipo di reale innovazione scientifica. Il Dr. Massimo Teodorani è un astrofisico italiano. Si

è laureato in Astronomia e ha successivamente conseguito il Dottorato di Ricerca in Fisica Stellare presso l'Università di Bologna. Come ricercatore, presso gli Osservatori Astronomici di Bologna e di Napoli e successivamente presso il Radiotelescopio di Medicina (BO), si è occupato di molti tipi di eventi esplosivi in ambienti stellari (supernove, nove, protostelle eruttive e stelle binarie strette di grande massa) e, più recentemente, della ricerca di pianeti extrasolari e di intelligenza extraterrestre nell'ambito del Progetto SETI. Ha successivamente insegnato Fisica Quantistica come professore incaricato all'Università di Bologna. Tra i suoi interessi di ricerca attiva c'è anche lo studio fisico dei fenomeni aerei anomali. Ha scritto 16 libri e svariati articoli divulgativi in materia di fisica quantistica, fisica atomica e nucleare, fisica delle anomalie luminose in atmosfera, astronomia, astrofisica, bioastronomia e argomenti aerospaziali. E' inoltre un compositore di musica elettronica con lo pseudonimo di "Totemtag". This book reflects on the future of the English language as used by native speakers, speakers of nativized New Englishes, and users of English as a lingua franca (ELF). The volume begins by outlining the current position of English in the world and accounts for the differences among native and nativized varieties and ELF usages. It offers a historical perspective on the impact of language contact on English and discusses whether the lexicogrammatical features of New Englishes and ELF are shaped by imperfect learning or deliberate language change. The book also considers the consequences of writing in a second language and questions the extent to which non-native English-speak-

ing academics and researchers should be required to conform to 'Anglo' patterns of text organization and 'English Academic Discourse.' The book then examines the converse effect of English on other languages through bilingualism and translation. This volume is essential reading for students and scholars in English language, sociolinguistics, language acquisition, and language policy.

With 52 poets who wrote between 1160 and 1560, *Melancholia poetica* brings contemporary English readers into the breadth and depth of the literary consciousness of the vibrant, worldly and imaginative realm of the Italian late Middle Ages and Renaissance.

5 unique Tools ... 3 seconds each to use ... A lifetime of fulfilment Can you imagine what your life would be if you could tap into a new source of power - one that has been inside you all along - to solve your own problems and become the master of your life? The Tools is an extraordinary psychological model based on the proven methods of Hollywood's greatest psychotherapists. Phil Stutz and Barry Michels have over 60 years of psychotherapeutic experience between them. Together they have helped their A-list clients work through whatever has held them back - be it insecurity, trauma, anger, lack of willpower, negativity or avoidance - and achieve their greatest work and find a deep level of fulfilment. Now, at last, the acclaimed clinicians are sharing their methods in this eye-opening and empowering book. Introducing their five simple techniques, namely The Reversal of Desire, Active Love, Inner Authority, The Grateful Flow and Jeopardy, the authors clearly explain what they are and how and when to use them. Astonishingly effective and beautifully simple - once you've learned a tool it takes only three to five seconds to use it - this book will give you everything you need to propel yourself forward to achieve your ambitions and be who you were born to be.

This open access book contains a structured collection of the complete solutions of all essential axisymmetric contact problems. Based on a systematic distinction regarding the type of contact, the regime of friction and the contact geometry, a multitude of technically relevant contact problems from mechanical engineering, the automotive industry and medical engineering are discussed. In addition to contact problems between isotropic elastic and viscoelastic media, contact problems between transversal-isotropic elastic materials and functionally graded materials are addressed, too. The optimization of the latter is a focus of current research especially in the fields of actuator technology and biomechanics. The book takes into account adhesive effects which allow access to contact-mechanical questions about micro- and nano-electromechanical systems. Solutions of the contact problems include both the relationships between the macroscopic force, displacement and contact length, as well as the stress and displacement fields at the surface and, if appropriate, within the half-space medium. Solutions are always obtained with the simplest available method - usually with the method of dimensionality reduction (MDR) or approaches which use the solution of the non-adhesive normal contact problem to solve the respective contact problem.

Do you know what the hardest thing for an Italian learner is? Finding PROPER reading material that they can handle...which is precisely the reason we've written this book! Teachers love giving out tough, expert-level literature to their students, books that present many new problems to the reader and force them to search for words in a dictionary every five minutes -- it's not entertaining, useful or motivating for the student at all, and many soon give up on learning at all! In this book we have compiled 20 easy-to-read, compelling and fun stories that will allow you to expand your vocabulary and give you the tools to improve your grasp of the wonderful Italian tongue. How Italian Short Stories for Beginners works: Each story will involve an important lesson of the tools in the Italian language (Verbs, Adjectives, Past Tense, Giving Directions, and more), involving an interesting and entertaining story with realistic dialogues and day-to-day situations. The summaries follow a synopsis in Italian and in English of what you just read, both to review the lesson and for you to see if you understood what the tale was about. At the end of those summaries, you'll be provided with a list of the most relevant vocabulary involved in the lesson, as well as slang and sayings that you may not have understood at first glance! Finally, you'll be provided with a set of tricky questions in Italian, providing you with the chance to prove that you learned something in the story. Don't worry if you don't know the answer to any -- we will provide them immediately after, but no cheating! So look no

further! Pick up your copy of Italian Short Stories for Beginners and start learning Italian right now! This volume provides an overview of research on Italian communities abroad, and, thus, represents an important contribution to the recent wave of paradigm renewal in the field of migration (socio)linguistics of Italian. The contributors here are some of the most active and rigorous exponents of this renewal tendency, and here they discuss new approaches and paradigms for the sociolinguistic study of migrations.

NOW A NETFLIX ORIGINAL FILM! When a soldier with a troubled past and a struggling songwriter agree to a marriage of convenience for the military benefits, neither expects much after saying "I do." Then tragedy strikes, and the line between what's real and what's pretend begins to blur in this smart and surprising romance perfect for fans of Nicholas Sparks and Jojo Moyes. Cassie Salazar and Luke Morrow couldn't be more different. Sharp-witted Cassie works nights at a bar in Austin, Texas to make ends meet while pursuing her dream of becoming a singer/songwriter. Luke is an Army trainee, about to ship out for duty, who finds comfort in the unswerving discipline of service. But a chance encounter at Cassie's bar changes the course of both their lives. Cassie is drowning in medical bills after being diagnosed with diabetes. When she runs into her old friend Frankie, now enlisted in the Army, she proposes a deal: she'll marry him in exchange for better medical insurance and they can split the increased paycheck that comes with having a "family." When Frankie declines, his attractive but frustratingly intense friend Luke volunteers to marry Cassie instead. What she doesn't know is that he has desperate reasons of his own to get married. In this unforgettable love story, Cassie and Luke must set aside their differences to make it look like a real marriage...unless, somewhere along the way, it becomes one...

Wolfgang Amadeus Mozart is a genius, the most brilliant musician the world will ever see. But the court of eighteenth-century Vienna doesn't recognize his talents - only Antonio Salieri, the Court Composer, does, and he is tortured by what he hears. Seething with rage at the genius of this flip-pant buffoon and suddenly aware of his own mediocrity, Salieri declares war and sets out to destroy the man he sees as God's instrument on earth. Peter Shaffer's award-winning play is a rich, exuberant portrayal of a God-like man among mortals, and lives destroyed by envy."
