This volume explores the nature of intellectual property law by looking at particular disputes. All the cases gathered here aim to show the versatile and unstable character of a discipline still searching for landmarks. Each contribution offers an opportunity to raise questions about the narratives that have shaped the discipline throughout its short but profound history. The volume begins by revisiting patent litigation to consider the impact of the Statute of Monopolies (1624). It continues looking at different controversies to describe how the existence of an author's right in literary property was a plausible basis for legal argument, even though no statute expressly mentioned authors' rights before the Statute of Anne (1710). The collection also explores different moments of historical significance for intellectual property law: the first trade mark injunctions; the difficulties the law faced when protecting maps; and the origins of originality in copyright law. Similarly, it considers the different ways of interpreting patent claims in the late nineteenth and twentieth century; the impact of seminal cases on passing off and the law of confidentiality; and more generally, the construction of intellectual property law

and its branches in their interaction with new technologies and marketing developments. It is essential reading for anyone interested in the development of intellectual property law.

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key Feature-SA go-to guide to help you master AI algorithms and concepts8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillanceUse TensorFlow, Keras, and other Python libraries to implement smart AI applicationsBook Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. The book provides a comprehensive reference on the neurobiological understanding of behaviour, how behaviour is regulated by the brain, and how such behaviours in turn influence the brain. The work offers an introduction to neural systems and genetics/epigenetics, followed by detailed study of a wide range of behaviours - temperament and personality, instincts and drives, memory and cognitive function, sex and sexual differentiation, ethology and evolutionary biology, aging, drug abuse and other problematic behaviors, psychophysiology and ultimately the links to biological psychiatry and psychopharmacology. Research findings on the neural basis of social behaviour are integrated across different levels of analysis, from

molecular neurobiology and neural systems/behavioural neuroscience to fMRI imaging data on human social behaviour. The content covers research on both normal and abnormal behaviours, as well as developmental aspects. The target audience includes psychiatrists, neurologists, nurses, psychologists and all researchers and advanced students in behavioural, social and developmental neuroscience, as well as clinical neuroscientists.

Lex Luger, wrestling megasensation and three-time world heavyweight champion, ruled the ring for years as "The Total Package." Whether he was making a dramatic entrance from a helicopter, defeating champ Hulk Hogan, or sculpting a near-perfect physique, Lex was on top of his game. Yet backstage, he was wrestling with addictions to sex, drugs, and alcohol—things he clung to even when his mistress died suddenly of a drug overdose and Lex went to jail. There, Lex faced the truth: he was losing the fight for his life. And still awaiting him was his most brutal opponent yet, when the wrestling champ found himself helplessly paralyzed from the neck down. In *Wrestling with the Devil*, Lex Luger reveals never-before-told stories from his career, his struggle with personal demons, and how, through unexpected faith, grace, and redemption, he overcame all odds to fight the only battle that really matters.

Scott Turner has brought to these pages his keen and nuanced sensitivity to the natural world that surrounds us. Turner's engaging prose reminds us how important it is to pay very close attention to nature and appreciate the lessons it can teach us -- over and over again -- about how to live meaningfully. Frederic Reamer, Host, *This I Believe*: New England, The Public's Radio and Professor, Rhode Island College Scott Turner's essays display an extraordinarily wide range of knowledge and curiosity about the natural world -- the plants, wild

animals (a few of them human), landscapes, weather and the seasons in the countryside, in cities and small towns, on the coasts and in the mountains and, sometimes with mordant humor, humans' reactions to them. We enjoy his take on the tough trees growing in gritty parts of New York City as well as his pleasure hiking in such bucolic settings as the Green Mountains. His observational intensity and precision energize us to appreciate the wonders all around us. Robert Whitcomb, President of The Boston Guardian, GoLocal24.com columnist, former editorial page editor of The Providence Journal and former senior editor at the International Herald Tribune

Considered the 'King of Poverty Row,' Edgar G. Ulmer (1904-1972) was an auteur of B productions. A filmmaker with an individual voice, Ulmer made independent movies before that category even existed. From his early productions like *The Black Cat* (1934) and Yiddish cinema of the late 1930s to his final films of the late 1950s and early 1960s, Ulmer created enduring

works within the confines of economic constraints. Almost forgotten, Ulmer was rediscovered first in the 1950s by the French critics of the Cahiers du Cinema and then in the early 1970s by young American directors, notably Peter Bogdanovich. But who was Edgar G. Ulmer? The essays in this anthology attempt to shed some light on the director and the films he created\_films that are great possibly because of, rather than despite, the many restrictions Ulmer endured to make them. In *The Films of Edgar G. Ulmer*, Bernd Herzogenrath has assembled a collection of essays that pay tribute to Ulmer's work and focus not only on his well-known films, including *Detour*, but also on rare gems such as *From Nine to Nine* and *Strange Illusion*. In addition to in-depth analyses of Ulmer's work, this volume also features an interview with Ulmer's wife and an interview Ulmer gave in 1965, in which he comments on actors Bela Lugosi and Boris Karloff, as well as fellow directors Tod Browning and James Whale.
