Sumptuous official 100th anniversary book. The inside story told for the first time by the grandson of the founder.

Set your pulse racing with this stunning visual guide to over 1000 pin-up machines - iconic symbols of wanderlust, speed, and the open road. From Gottlieb Daimler's gas-powered "engine on a bicycle" which set fire to the seat on its first outing, to superbikes such as the Ducati 916, Motorcycle: The Definitive Visual History takes you on an enthralling tour of the bike's history. It shows you bikes that appeal to the head - practical forms of transport - and to the heart - a parade of classic pin-ups including cult machines such as the Honda RC30, the Triumph Bonneville, and the Harley-Davidson XR750. Motorcycle: The Definitive Visual History shows the brilliance and impracticality of different designs and features detailed cross-sections of engines such as the air-cooled two-stroke. It explains how the great marques such as the Royal Enfield, the "legendary" Indian Scout, Vespa, and Norton all became household names. Whether you are a hardcore enthusiast or looking forward to your first machine, this is one title you

cannot be without.

Moral and political questions are vitally relevant to the issue of survival in the nuclear age. Ethics has much to teach us about the meaning of national defence

and civic responsibility in the nuclear state. For instance, those in NATO who argue for increased spending on such weapons do so with the intention of defending the values of the West. They must therefore be absolutely sure that they are not - as the contributors to this volume, originally published in 1984, powerfully suggest - undermining or destroying those values by the very means they adopt to preserve them. With the continued success of nuclear deterrence itself in question, responsible citizens feel an urgent need to assess the clash between personal doubts, cherished principles and their governments' loudly voiced moral certainties. In Objections to Nuclear Defence, professional philosophers of widely varying persuasions provide new analyses of these problems. They spell out clearly and vividly the moral and political objections - objections to the concrete nuclear policies of the Western governments today. Often impassioned but always rational, the book will be of special interest to students of international affairs, peace studies and applied philosophy as well as to the general reader who is trying to choose between political parties in Europe or North America.
