The field of professional, academic and vocational qualifications is ever-changing. The new edition of this highly successful and practical guide provides thorough information on all developments. Fully indexed, it includes details on all university awards and over 200 career fields, their professional and accrediting bodies, levels of membership and qualifications. It acts as an one-stop guide for careers advisors, students and parents, and will also enable human resource managers to verify the qualifications of potential employees.

This book provides the apprentice or trainee carpenter and joiner with the basic technical knowledge necessary to complete the first half of a City and Guilds Course in Carpentry and Joinery. It will also be a useful reference to any persons studying for examinations, or simply wishing to further their knowledge in one of the associated areas, such as wood machining, cabinet making or general building construction. Dealing with the basic skills and techniques employed in the present day construction industry, the text assumes little prior knowledge of the subject, but lays before the reader a simple, straight forward and readable out of the skills, tools, materials and methods likely to be used or encountered in the workshop, on site or during studies at home or in college.

A visual resource for students providing training in construction crafts. It covers the Craft Certificate requirements, giving information that students need to pass their exam, with exam style multiple-choice assessment questions, which provide extra support for revision and exam preparation.

Describes the tools and skills of carpentry while demonstrating the procedures involved in constructing a house

This book deals with sound craftsmanship utilising correct tools and materials. Practical advice on subjects such as framework, design and construction, timberfloor construction and arch centres.

Abstract: Alternate assessment techniques for measuring performance skills (in laboratory, factory, field, or classroom) as opposed to the traditional multiple-choice ways of testing competency are available. Guidelines are suggested for developing an assessment program and designing assessment instruments. An array of assessment techniques are divided into 6 categories: actual performance, simulations, observational, oral, paper-pencil, and program requirements. A method of integrating multiple assessment techniques to achieve goals is introduced through the concept of the assessment center. Actual testing programs used in education, training, and the professions are described to demonstrate the usefulness of selecting the right tool for the job. (k-bc).
