This book provides the apprentice or trainee carpenter and joiner with the basic technical knowledge necessary to complete the first half of a City and Guilds Course in Carpentry and Joinery. It will also be a useful reference to any persons studying for examinations, or simply wishing to further their knowledge in one of the associated areas, such as wood machining, cabinet making or general building construction. Dealing with the basic skills and techniques employed in the present day construction industry, the text assumes little prior knowledge of the subject, but lays before the reader a simple, straight forward and readable out of the skills, tools, materials and methods likely to be used or encountered in the workshop, on site or during studies at home or in college.

Abstract: Alternate assessment techniques for measuring performance skills (in laboratory, factory, field, or classroom) as opposed to the traditional multiple-choice ways of testing competency are available. Guidelines are suggested for developing an as-

essment program and designing assessment instruments. An array of assessment techniques are divided into 6 categories: actual performance, simulations, observational, oral, paper-pencil, and program requirements. A method of integrating multiple assessment techniques to achieve goals is introduced through the concept of the assessment center. Actual testing programs used in education, training, and the professions are described to demonstrate the usefulness of selecting the right tool for the job. (kbc).

This exceptionally produced trainee guide features a highly illustrated design, technical hints and tips from industry experts, review questions and a whole lot more Key content includes Commercial Drawings, Roofing Applications, Thermal and Moisture Protection, Exterior Finishing, Cold-Formed Steel Framing, Drywall Installation, Drywall Finishing, Doors and Door Hardware, Suspended Ceilings, Window, Door, Floor, and Ceiling Trim, Cabinet Installation and Cabinet Fabrication.
