Parkinson's disease (PD) is a common neurodegenerative disorder characterized by a slowly progressive motor dysfunction and loss of dopaminergic neurons located in the substantia nigra innervating the striatum, causing depletion of dopamine, which leads to a hyperactivation of the striatal medial spiny neurons. To understand the pathophysiological details of PD and for developing and screening the novel therapeutic and/or neuroprotective substances, animal models for PD induced by neurotoxins have been developed. Among them, 1-methyl-4-phenyl-1,2,3,6-tetrahydropyridine (MPTP) is the most commonly used since it causes a selective loss of dopaminergic neurons in the substantia nigra and induces typical PD-like symptoms both in human and in experimental animals with a relatively simple application. In this chapter, we first overview the characteristics of PD and animal models with neurotoxins to establish, then focus on, MPTP-treated mouse and common marmoset models for PD with their practical experimental protocols and applications.

This Code of Practice is a reference tool for those dealing with, and caring for people admitted to hospital and care homes with mental health problems. Authored by the Department of Health and produced following wide consultation with those who provide and receive services under the Mental Health Act, this publication will come into force on 3 November 2008. Through the Mental Health Act 2007, the Government has updated the 1983 Act to ensure it keeps pace with the changes in the way that mental health services are - and need to be - delivered. This publication provides guidance and advice to registered medical practitioners, approved clinicians, managers and staff of hospitals, and approved mental health professionals on how they should proceed when undertaking duties under the Act. It also gives guidance to doctors and other professionals about certain aspects of medical treatment for mental disorder more generally. The Mental Health Act Code of Practice is also aimed at all of those working in primary care, Mental Health Trusts, NHS Foundation Trusts as well as solicitors and attorneys who advise on mental health law. The Code should also be beneficial to the police and ambulance services and others in health and social services (including the independent and voluntary sectors) involved in providing services to people who are, or may become, subject to compulsory measures under the Act. It will also be a guide for those working with people with specific mental health needs such as those in nursing and care homes, and those in prison.

In this landmark effort to understand African American people in the New World, Gunnar Myrdal provides deep insight into the contradictions of American democracy as well as a study of a people within a people. The title of the book, 'An American Dilemma', refers to the moral contradiction of a nation torn between allegiance to its highest ideals and awareness of the base realities of racial discrimination. The touchstone of this classic is the jarring discrepancy between the American creed of respect for the inalienable rights to freedom, justice, and opportunity for all and the pervasive violations of the dignity of blacks. The appendices are a gold mine of information, theory, and methodology. Indeed, two of the appendices were issued as a separate work given their importance for systematic theory in social research. The new introduction by Sissela Bok offers a remarkably intimate yet rigorously objective appraisal of Myrdal—a social scientist who wanted to see himself as an analytic intellectual, yet had an unbending desire to bring about change. 'An American Dilemma' is testimonial to the man as well as the ideas he espoused. When it first appeared 'An American Dilemma' was called "the most penetrating and important book on contemporary American civilization" by Robert S. Lynd; "One of the best political commentaries on American life that has ever been written" in The American Political Science Review; and a book with "a novelty and a courage seldom found in American discussions either of our total society or of the part which the Negro plays in it" in 'The American Sociological Review'. It is a foundation work for all those concerned with the history and current status of race relations in the United States.

This text is divided into three parts. The first part describes basic toxicological concepts and methodologies used in aquatic toxicity testing, including the philosophies underlying testing strategies now required to meet and support regulatory standards. The second part of the book discusses various factors that affect transport, transformation, ultimate distribution, and accumulation of chemicals in the aquatic environment, along with the use of modelling to predict fate.; The final section of the book reviews types of effects or endpoints evaluated in field studies and the use of structure-activity relationships in aquatic toxicology to predict biological activity and physio-chemical properties of a chemical. This section also contains an extensive background of environmental legislation in the USA and within the European Community, and an introduction to hazard/risk assessment with case studies.
