Building on the achievements of Goethe in his Theory of Colour, Rudolf Steiner shows how colour affects us in many areas of life, including our health, our sense of well-being, and our feelings. Distinguishing between 'image' and 'lustre' colours, he lays the foundation, based on his spiritual-scientific research, for a practical technique of working with colour that leads to a new direction in artistic creativity. His many penetrating remarks on some of the great painters of the past are supplemented by a deep concern to see a cultural, spiritual renewal emerge in the present time. 'If you realize', he states, 'that art always has a relation to the spirit, you will understand that both in creating and appreciating it, art is something through which one enters the spiritual world.' This volume is the most comprehensive compilation of Rudolf Steiner's insights into the nature of colour, painting and artistic creation. It is an invaluable source of reference and study not only for artists and therapists but for anyone interested in gaining an appreciation of art as a revelation of spiritual realities.

Chemistry: The Study of Matter and Its Changes, Sixth Edition will provide the necessary practice, support and individualised instruction that ensures success in the General Chemistry course. This text provides the forum for problem solving and concept mastery of chemical phenomena that leads to proficiency and success in the General Chemistry course. This edition will continue a "molecular basis of chemistry" tradition, but in a manner that overtly and repeatedly reinforces the way properties at the molecular level are related to properties we observe at the macroscopic level. The unique "chemical tools" approach employed in this book provides a way of thinking that helps those students develop the ability to analyse and solve both mathematical and conceptual problems. This text follows the successful three-step approach described as "ANALYSIS," "SOLUTION" and "IS THE ANSWER REASONABLE?" This encourages the student to think about the problem before attempting to solve it, then working through the solution, and finally asking the important question "Does the answer make sense?" There are problem sets called "Bringing It Together" that contain problems which require students to bring together concepts from two or more of the preceding chapters. This reinforces learned concepts and builds concept mastery.

A brand new female vicar. An accident-prone nun. Two friends. Two killings. Annabelle and Mary are best friends. But when one gets framed for murder, can the other one save her? Assigned to St. Clement's Church in an inner-city borough just outside Hackney in London, Reverend Annabelle Dixon brings an enthusiasm and drive to her clerical position that baffles her mentor, Father John, but which soon gains her fans and admiration. Annabelle is not your typical vicar, but her strengths prove to serve her, and those around her, very well. When she plans to meet her longtime friend, Sister Mary, a Catholic nun visiting from West Africa, at a local café, little does she know that she will soon find herself embroiled in a mystery of deadly design. Their meeting place is awash with horror, with Sister Mary standing in the middle, shaking, her hand over her mouth and a dead woman at her feet. Armed only with a note, a disappearing dart, vague hints, and a love of cake, this quick-thinking, quick-footed holy woman must gather the clues, pacify a detective, and find the real perpetrator before both she and her friend wind up in jail. Part Sherlock, part Father Dowling, Annabelle is a new kind of detective - one who sees the truth in the most unlikely places. If you love solving puzzles, then this suspense-filled, endearing, cozy mystery is just for you. Enjoy following our amateur sleuth as she careers around London. It will have you guessing until the very end! Included in this book are recipes for: Cherishable Cherry Blossom Cupcakes Cherubic Chocolate Caramel Bars Jubilicious Jam Turnovers Teresa's Surprise Cake Interview with the Creator of the Series Q - So, what makes the Reverend Annabelle Dixon series special? A - Annabelle. When I set out to write these books, I wanted to create a series that featured a heart-warming, smart, sometimes ditzy, ultimately good protagonist that we all undisputedly adore. It is Annabelle - her humanity, her empathy, her big heart - who makes the series so special. With her sometimes partner, sometimes antagonist, Inspector Mike Nicholls, they create some fun and drama as the small town mysteries unfold with humor and intrigue. If you enjoy the TV series, The Vicar of Dibley, Miranda, or Midsomer Murders, I think you will enjoy the Reverend Annabelle cozy mysteries. Q - In what order should I read the books? A - The Reverend Annabelle Dixon cozy mysteries can be read, and enjoyed, in any order. The prequel, Death at the Café is set in London and takes place a few years before the rest in the series. If you do want to read them in order, I'd suggest the following sequence: Death at the Café (prequel) Murder at the Mansion Body in the Woods (coming soon) Q - Why should readers give these books a try? A - Because the Reverend Annabelle series is a gentle, but colorful romp through the beautiful English countryside in a place that is picturesque and peaceful on the outside but one filled with amoral and snobbish eccentrics with all kinds of vices on the inside. Annabelle is a fun, uncomplicated character who is soulful, devout, smart, and funny with penchant for cake. Both Jamie and I feature many English countryside rituals, institutions and customs in these stories. Ultimately, readers who enjoy gentle pacing with a plot that twists and turns, features much fun, drama, quintessential Britishness, and small town murder, will get a kick out of this series. It will make you laugh and you will, I hope, become invested in the characters, rooting for them to come out on top.

A 'travel guide' to the periodic table, explaining the history, geography and the rules of behaviour in this imagined land. The *Periodic Kingdom* is a journey of imagination in which Peter Atkins treats the periodic table of elements - the 109 chemical elements in the world, from which everything is made - as a country, a periodic kingdom, each region of which corresponds to an element. Arranged much like a travel guide, the book introduces the reader to the general features of the table, the history of the elements, and the underlying arrangement of the table in terms of the structure and properties of atoms. Atkins sees elements as finely balanced living personalities, with quirks of character and certain, not always outward, dispositions, and the kingdom is thus a land of intellectual satisfaction and infinite delight.
