Ciencia Ambiental Sustaining The Earth

Earth Day Turns 50 | Climate Matters

We explore the risk that self-reinforcing feedbacks could push the Earth System toward a planetary threshold that, if crossed, could prevent stabilization of the climate at intermediate temperature rises and cause continued warming on a “Hothouse Earth” pathway even as human emissions are reduced. Crossing the threshold would lead to a much higher global average temperature than any ...

Rare earth elements (REEs) are critical and strategic materials in the defense, energy, electronics, and automotive industries. The reclamation of REEs from coal combustion fly ash has been proposed as a way to supplement REE mining. However, the typical REE contents in coal fly ash, particularly in the United States, have not been comprehensively documented or compared among the major types ...

Earth Day's 50th anniversary is a fitting time for these reflections. On the first Earth Day in 1970, involvement from 20 million people paved the way for cleaner air, cleaner water, and more protected land. If similar efforts reduced human-caused greenhouse gas emissions, we could "flatten the curve" of rising temperatures as well.
