If you add a SATA controller, you can reassign an existing or new hard disk or device to that controller. For example, you can assign the device to (1:z), where 1 is SATA controller 1 and z is a virtual device node from 0 to 29. For SATA controllers, you can use device nodes 0 through 29, including 0:7.

Yet another passthrough post I know but I'm at a loss for things to try. I need to passthrough my SATA AHCI controller directly to a Windows 10 guest VM. What is strange is that it works on Linux-based guests but not Windows-based (tried Server 2019 and 10). The VM dies just after the VMWare splash screen after Power On.
