Commercial Aircraft Projects: Managing the Development of Highly Complex Products proposes an integrated architecture and details, step-by-step, how it can be

used for the management of commercial aircraft development projects. The findings can also be applied to other industrial sectors that produce complex hardware based on design inputs.

Commercial Aircraft Projects by Hans-Henrich Altfeld (ebook)

Complex projects like the development of commercial aircraft require the management of an enormous amount of data and information. Experience over many decades has proven that the use of structured architectures, that is, systems of interlinked modules, provides significant support to the management of a project.
